Fatal Work Injuries in Iowa — 2012

Fatal work injuries totaled 84 in 2012 for Iowa, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Charlene Peiffer noted that while the 2012 count was preliminary, the number of work-related fatalities in Iowa declined by nine over the year. Fatal occupational injuries in the state have ranged from a high of 110 in 1992 to a low of 54 in 1995. Over the last 10 years, the annual average number of fatalities was 84. (See [chart 1.](#))

Nationwide, a preliminary total of 4,383 fatal work injuries were recorded in the United States in 2012, down from a revised count of 4,693 fatal work injuries in 2011, according to results from the Census of Fatal Occupational Injuries (CFOI) program. Final 2012 CFOI data will be released in Spring 2014.

Chart 1. Total fatal occupational injuries, Iowa, 2003—2012

NOTE: Data for 2012 are preliminary.
SOURCE: U.S. Bureau of Labor Statistics.

Of the 84 fatal work injuries reported in Iowa in 2012, 44 resulted from transportation incidents and 19 from contact with objects and equipment; together these two major categories accounted for three-quarters of all fatal work injuries. Other major event categories each reported less than 10 deaths. (See [table 1.](#)) Within transportation incidents, roadway incidents involving motorized land vehicles was the most frequent type of workplace fatality with 25 deaths; in fact, it accounted for nearly one-third of all on-the-job fatalities in the state. The second largest event in transportation incidents, nonroadway incidents involving motorized land

vehicles, accounted for 14 fatalities. In the contact with objects and equipment category, 14 deaths occurred from being struck by an object or equipment. (Note that transportation counts presented in this release are expected to rise when updated 2012 data are released in Spring 2014 because key source documentation detailing specific transportation-related incidents has not yet been received.)

In the United States, transportation incidents were also the most frequent fatal workplace event in 2012, accounting for 41 percent of fatal work injuries. However, Iowa's 52-percent share of on-the-job fatalities due to this event was much larger than the nationwide share. (See [chart 2](#).) Violence and other injuries by persons or animals was the second most frequent type of event nationally, with 17 percent of work-related fatalities, 11 percentage points higher than the share in Iowa. Contact with objects or equipment (16 percent) and falls, slips, and trips (15 percent) were the third and fourth most frequent events, respectively, in the nation.

Chart 2. Fatal occupational injuries by selected event, Iowa and the United States, 2012

NOTE: Data for 2012 are preliminary.
SOURCE: U.S. Bureau of Labor Statistics.

Additional key characteristics:

- The agriculture, forestry, fishing, and hunting industry sector had the largest number of fatalities in the state with 30, compared to 27 the previous year. (See [table 2](#).) Transportation incidents accounted for 19 of the worker deaths, while 8 fatalities were due to contact with objects and equipment.
- The construction industry and the transportation and warehousing industry had the second highest fatality count with 13 each. Transportation incidents accounted for five worker deaths in both sectors.
- Management occupations had the highest number of fatal work injuries with 26. (See [table 3](#).) The majority of these fatalities were farmers, ranchers, and other agricultural managers (23). Workers in transportation and material moving occupations had the next highest fatality count at 23.
- Men accounted for 78, or 93 percent, of the work-related fatalities in the state. (See [table 4](#).) Transportation incidents made up over one-half of these fatalities.

- In Iowa, 93 percent of those who died from a workplace injury were white non-Hispanics. Nationwide, this group accounted for 68 percent of work-related deaths.
- Workers 25-54 years old—the prime working age group—accounted for 42, or 50 percent, of the state’s work-related fatalities in 2012. Nationally, workers in this group accounted for 59 percent of on-the-job fatalities.
- Of the 84 persons that suffered fatal work injuries in Iowa, 57 percent worked for wages and salaries; the remaining were self-employed. The most frequent fatal event for both groups was transportation incidents.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the United States during the calendar year. The program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This assures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/homch9.htm.

Federal/State agency coverage. The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Acknowledgments. The Bureau of Labor Statistics appreciates the efforts of all federal, state, local, and private sector entities that submitted source documents used to identify fatal work injuries, in particular the Iowa Division of Labor Services.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
