Fatal Work Injuries in Nebraska — 2013

Fatal work injuries totaled 39 in 2013 for Nebraska, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Charlene Peiffer noted that while the 2013 count was preliminary, the number of work-related fatalities in Nebraska declined by nine over the year. Fatal occupational injuries in the state have ranged from a high of 83 in 2002 and 1994 to a low of 36 in 2005. (See [chart 1.](#))

Nationwide, a preliminary total of 4,405 fatal work injuries were recorded in 2013, down from a revised count of 4,628 fatalities in 2012, according to results from the Census of Fatal Occupational Injuries (CFOI) program. Final 2013 CFOI data will be released in the late spring of 2015.

Chart 1. Total fatal occupational injuries, Nebraska, 2004—2013

NOTE: Data for 2013 are preliminary.
Source: U.S. Bureau of Labor Statistics.

Of the 39 fatal work injuries reported in Nebraska in 2013, 21 resulted from transportation incidents and 9 from contact with objects and equipment. Together these two major categories accounted for more than three-quarters of all fatal work injuries in the state. (See [table 1.](#)) Other major event categories each reported four or fewer deaths. Within transportation incidents, roadway incidents involving motorized land vehicles was the most frequent type of workplace fatality with 12 deaths. This category accounted for nearly one-third of all on-the-job fatalities in the state. In the contact with objects and equipment category, seven of the nine deaths

occurred as a result of being struck by an object or equipment. (Note that transportation counts presented in this release are expected to rise when updated 2013 data are released in the late spring of 2015 because key source documentation detailing specific transportation-related incidents has not yet been received.)

Chart 2. Fatal occupational injuries by selected event, Nebraska and the United States, 2013

In the United States, transportation incidents were also the most frequent fatal workplace event in 2013, accounting for 40 percent of fatal work injuries. Nebraska’s 54-percent share of fatalities due to this event was larger than the nationwide share. (See [chart 2.](#)) Violence and other injuries by persons or animals was the second most frequent type of event nationally, with 17 percent of work-related fatalities; the share in Nebraska was 10 percent. Contact with objects and equipment and falls, slips, or trips each accounted for 16 percent of the nation’s workplace fatalities, while in the state, these events were responsible for 23 and 10 percent of workplace fatalities, respectively.

Additional key characteristics:

- The agriculture, forestry, hunting, and fishing industry had the largest number of fatalities in the state with 15, compared to 13 in the previous year. (See [table 2.](#)) Transportation incidents accounted for nine worker deaths within this sector.
- The construction industry had the second highest fatality count with seven. Transportation incidents were also the leading cause, accounting for four worker deaths.
- Management occupations had the highest number work related fatalities with 11. (See [table 3.](#)) Farmers, ranchers, and other agricultural managers accounted for eight of these deaths. Workers in transportation and material moving occupations had the next highest fatality count at six.
- Men accounted for 36, or 92 percent, of the work-related fatalities in the state. (See [table 4.](#)) Transportation incidents made up 50 percent of these fatalities.
- In Nebraska, 85 percent of those who died from a workplace injury were white non-Hispanics. Nationwide, this group accounted for 68 percent of work-related deaths.

- Workers 25-54 years old—the prime working age group—accounted for 18, or 46 percent of the state’s work-related fatalities in 2013. Nationally, workers in this group accounted for 60 percent of on-the-job fatalities.
- Of the 39 fatal work injuries in Nebraska, 69 percent worked for wages and salaries; the remainder was self-employed. The most frequent fatal event for wage and salary workers and the self-employed was transportation incidents.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the United States during the calendar year. The program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This assures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/homch9.htm.

Federal/State agency coverage. The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Acknowledgments. The Bureau of Labor Statistics appreciates the efforts of all federal, state, local, and private sector entities that submitted source documents used to identify fatal work injuries, in particular the Nebraska Workers' Compensation Court.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
