Average Energy Prices, Chicago-Gary-Kenosha – November 2014

Gasoline prices averaged \$3.063 a gallon in the Chicago-Gary-Kenosha area in November 2014, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Charlene Peiffer noted that area gasoline prices were down 37.3 cents compared to last November when they averaged \$3.436 per gallon. Chicago area households paid an average of 14.9 cents per kilowatt hour (kWh) of electricity in November 2014, up from 12.5 cents per kWh in November 2013. The average cost of utility (piped) gas at 90.6 cents per therm in November was up from 87.7 cents per therm a year earlier. (Data in this release are not seasonally adjusted; accordingly, over-the-year-analysis is used throughout.)

At \$3.063 a gallon, costs for gasoline in the Chicago area were 11.8 cents, or 4.0 percent, above the national average of \$2.945 a gallon in November 2014. Last November, gasoline costs in Chicago were 3.8 percent higher than the nation. Over the past five Novembers, prices for a gallon of gasoline in Chicago have exceeded the U.S. average by 10.8 cents or more. (See [chart 1.](#))

Technical Note

Average prices are estimated from Consumer Price Index (CPI) data for selected commodity series to support the research and analytic needs of CPI data users. Average prices for electricity, utility (piped) gas, and gasoline are published monthly for the U.S. city average, the 4 regions, the 3 population size classes, 10 region/size-class cross-classifications, and the 14 largest local index areas. For electricity, average prices per kilowatt-hour (kWh) are published. For utility (piped) gas, average prices per therm are published. For gasoline, the average price per gallon is published. Average prices for commonly available grades of gasoline are published as well as the average price across all grades.

All eligible prices are converted to a price per normalized quantity. These prices are then used to estimate a price for a defined fixed quantity. The average price per kilowatt-hour represents the total bill divided by the kilowatt-hour usage. The total bill is the sum of all items applicable to all consumers appearing on an electricity bill including, but not limited to, variable rates per kWh, fixed costs, taxes, surcharges, and credits. This calculation also applies to the average price per therm for utility (piped) gas.
