## **Consumer Expenditures for the Minneapolis-St. Paul Metropolitan Area: 2013-14**

Households in the Minneapolis-St. Paul, Minn.-Wis. metropolitan area spent an average of \$66,934 per year in 2013–14, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Charlene Peiffer noted that this figure was significantly higher than the \$52,284 average expenditure level for households in the United States. Minneapolis-area households allocated their dollars similarly among the eight major categories, with only one differing significantly from the U.S. average. For example, the share of expenditures for food, which accounted for 11.3 percent of the average household’s budget in the Minneapolis area, was significantly lower than the national average of 12.8 percent. (See [chart 1](#) and [table 1](#)).

Chart 1. Percent distribution of average annual expenditures for eight major categories in the United States and Minneapolis-St. Paul metropolitan area, 2013-14

## Highlights of the Minneapolis area's 2013–14 spending patterns:

- **Housing:** This was the largest expenditure category for Minneapolis-area households and averaged \$21,698. Housing accounted for 32.4 percent of the area's household budget, similar to the 33.4-percent U.S. average. (See [table 1.](#)) Among 18 metropolitan areas nationwide for which data were available, Minneapolis was 1 of 8 areas to have a housing expenditure share not significantly different from the national average. Housing expenditure shares among the 18 areas ranged from 39.6 percent in New York to 30.2 percent in Detroit. (See [table 2.](#))
- **Transportation:** A Minneapolis-area household spent 17.9 percent of its budget on transportation, not significantly different from the national average of 17.3 percent. Of the \$11,991 in annual transportation expenditures in Minneapolis, 95.0 percent was spent buying and maintaining private vehicles; this compared to the national average of 93.8 percent.
- **Food:** The portion of a Minneapolis household's budget spent on food, 11.3 percent, was significantly lower than the 12.8-percent U.S. average. Minneapolis-area households spent \$4,213, or 55.6 percent, of their food dollars on food prepared at home and \$3,371 (44.5 percent) on food prepared away from home. In comparison, the average U.S. household spent 59.5 percent of its food budget on food prepared at home and 40.5 percent on food prepared away from home.

## Additional Information

Data in this release are from the Consumer Expenditure Survey (CE), which the U.S. Census Bureau conducts for the U.S. Bureau of Labor Statistics. The data in this release were averaged over a 2-year period, 2013 and 2014.

A household in the CE survey is defined as a consumer unit which consists of members related by blood, marriage, adoption, or other legal arrangement; a single person living alone or sharing a household with others but who is financially independent; or two or more persons living together who share responsibility for at least 2 out of 3 major types of expenses – food, housing, and other expenses. The terms household or consumer unit are used interchangeably for convenience.

Differences in spending among metropolitan areas may reflect differences in the cost of living, but they also may reflect other causes. Spending differences may result from different consumer preferences or variations in demographic characteristics, such as household size, age, or income levels. However, expenditure shares, or the percentage of a household's budget spent on a particular category, can be used to compare spending patterns across areas. Sample sizes for the metropolitan areas are much smaller than for the nation, so the U.S. estimates and year-to-year changes are more reliable than those for the metropolitan areas. Users should also keep in mind that prices for many goods and services have changed since the survey was conducted.

A value that is statistically different from another does not necessarily mean that the difference has economic or practical significance. Statistical significance is concerned with our ability to make confident statements about a universe based on a sample. A large difference between two values may not be statistically significant, while a small difference could be significant; both the sample size and the variation among the values in the sample affect the relative error of the estimates.

For additional technical and related information, see [www.bls.gov/opub/hom/pdf/homch16.pdf](http://www.bls.gov/opub/hom/pdf/homch16.pdf). Data for the nation, the four geographic regions of the U.S., and 18 metropolitan areas nationwide are available at [www.bls.gov/cex/tables.htm](http://www.bls.gov/cex/tables.htm). Metropolitan definitions used in the survey are available at [www.bls.gov/regions/ce\\_areadef.pdf](http://www.bls.gov/regions/ce_areadef.pdf). The metropolitan area discussed in this release is Minneapolis-St. Paul, Minn.-Wis., which is comprised of Anoka, Benton, Carver, Chisago, Dakota, Hennepin, Isanti, Ramsey, Scott, Sherburne, Stearns,

Washington, and Wright Counties in Minnesota; and Pierce and St. Croix Counties in Wisconsin. Metropolitan area news releases for the Consumer Expenditure Survey are available at [www.bls.gov/regions/consumerspending.htm](http://www.bls.gov/regions/consumerspending.htm).

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 800-877-8339.

**Table 1. Average annual expenditures, characteristics, and percent distributions, United States and Minneapolis-St. Paul metropolitan area, 2013–14**

Category	United States	Minneapolis-St. Paul
