Business Employment Dynamics in Indiana — Third Quarter 2017

From June 2017 to September 2017, gross job losses in Indiana totaled 144,972, while gross job gains numbered 143,839, the U.S. Bureau of Labor Statistics reported today. Assistant Commissioner for Regional Operations Charlene Peiffer noted that gross job losses exceeded gross job gains by 1,133. During the previous quarter, gross job gains exceeded gross job losses by 5,297. (See [chart 1.](#))

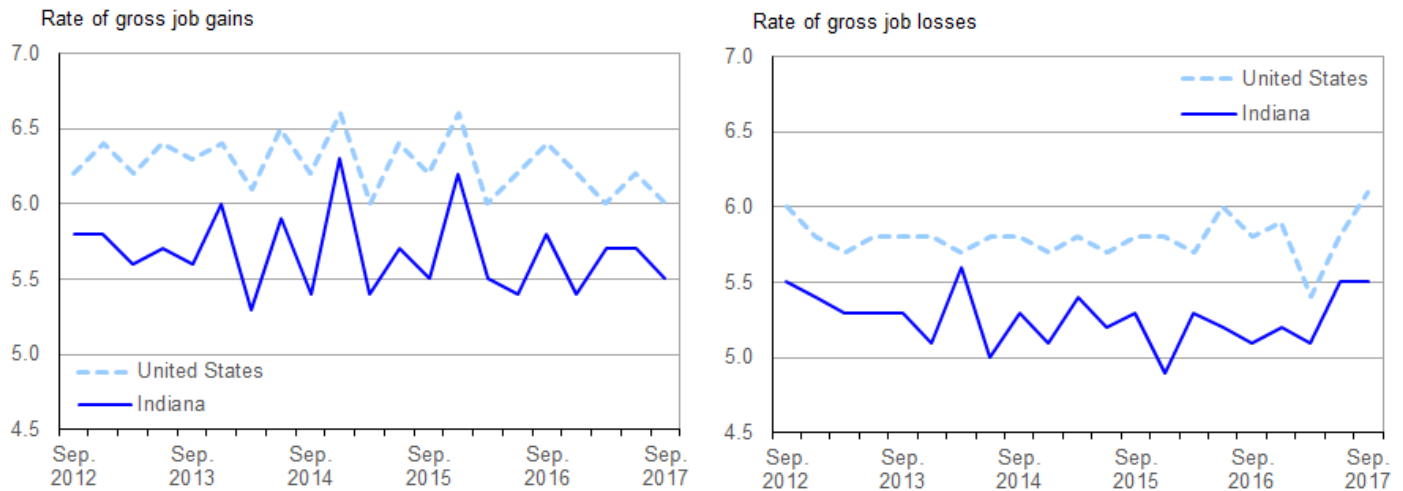

Chart 1. Private sector gross job gains and losses in Indiana, September 2012–September 2017, seasonally adjusted

Source: U.S. Bureau of Labor Statistics.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all businesses in the economy. Business Employment Dynamics (BED) statistics track these changes in employment at private business establishments from the third month of one quarter to the third month of the next. Gross job losses are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at opening establishments. Gross job gains are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. The difference between the number of gross job losses and the number of gross job gains is the net change in employment. (See the [Technical Note](#) for more information.).

Chart 2. Private sector gross job gains and losses as a percent of employment, United States and Indiana, September 2012–September 2017, seasonally adjusted

Source: U.S. Bureau of Labor Statistics.

Gross job losses represented 5.5 percent of private sector employment in Indiana in the quarter ended September 2017; nationally, gross job losses accounted for 6.1 percent of private sector employment. (See [chart 2](#).) Since the series inception in 1992, the rate of gross job losses in Indiana has been below the U.S. rate each quarter, with three exceptions. Gross job gains accounted for 5.5 percent of private sector employment in Indiana in the quarter ended September 2017, lower than the national rate of 6.0 percent. Since the series began, Indiana's rate of gross job gains has been below the national rate, with only one exception.

During the third quarter of 2017, gross job losses exceeded gross job gains in six industry sectors in Indiana. For example, within retail trade, gross job losses exceeded gross job gains by 1,507. While almost 20,000 jobs were created by opening and expanding establishments in the industry, more than 21,300 jobs were lost in closing and contracting establishments in the 3-months ended in September 2017. In leisure and hospitality, more than 25,000 jobs were created in opening and expanding establishments and more than 26,000 jobs were lost in closing and contracting establishments. In each of the remaining sectors with net employment losses, gross job losses exceeded gross job gains by less than 800. (See [table 1](#).)

In contrast, gross job gains exceeded gross job losses in five industry sectors. Within education and health services, gross job gains exceeded gross job losses by 2,240. In each of the four remaining sectors with net employment gains, gross job gains exceeded gross job losses by less than 700.

Indiana was among the five states in the East North Central Census division. Gross job losses exceeded gross job gains in all five states in the division in the third quarter of 2017. (See [table A](#).) All five states had rates of gross job losses that were lower than the 6.1-percent national rate. The five states also had rates of gross job gains that were below the 6.0-percent national rate.

Footnotes:

(1) Data were calculated for this release using published gross job gains and gross job losses for states located in the East North Central Census Division.

Note: Dash indicates data not available.

Additional statistics and other information

BED data for the states have been included in [table 2](#) of this release. For more information on the Business Employment Dynamics data, visit the BED web site at www.bls.gov/bdm/.

The Business Employment Dynamics release for fourth quarter 2017 is scheduled to be released on Wednesday, July 25, 2018.

Effects of Hurricanes Irma and Maria on the Business Employment Dynamics

Hurricanes Irma and Maria made landfall in the United States on September 7 and September 20, 2017, respectively, during the BED third quarter reference period. These events did not cause changes to BED methodology. However, they did affect data collection in Puerto Rico and the Virgin Islands. For more information, please visit the Quarterly Census of Employment and Wages (QCEW) section of the following webpage: www.bls.gov/bls/hurricanes-harvey-irma-maria.htm.

Technical Note

The Business Employment Dynamics (BED) data are a product of a federal-state cooperative program known as Quarterly Census of Employment and Wages (QCEW), or the ES-202 program. The BED data are compiled from existing QCEW records. The QCEW reports are sent by the State Employment Security Agencies (SESAs) to BLS and form the basis of the Bureau's QCEW program and establishment universe sampling frame. These reports are also used to produce the QCEW data on total employment and wages. Other important Bureau uses of the QCEW reports are in the Current Employment Statistics (CES) program. The CES program produces monthly estimates of employment, net changes, and earnings by detailed industry.

In the BED program, the QCEW records are linked across quarters to provide a longitudinal history for each establishment. The linkage process allows the tracking of net employment changes at the establishment level, which in turn allows the estimation of jobs gained at opening and expanding establishments and jobs lost at closing and contracting establishments.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all businesses in the economy. BED statistics track these changes in employment at private business establishments from the third month of one quarter to the third month of the next. Gross job gains are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at

opening establishments. Gross job losses are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. The difference between the number of gross jobs gained and the number of gross jobs lost is the net change in employment.

Gross job gains and gross job losses are expressed as rates by dividing their levels by the average of employment in the current and previous quarters. The rates are calculated for the components of gross job gains and gross job losses and then summed to form their respective totals. These rates can be added and subtracted just as their levels can. For instance, the difference between the gross job gains rate and the gross job losses rate is the net growth rate.

The formal definitions of employment changes are as follows:

Openings. These are either establishments with positive third month employment for the second time in the current quarter, with no links to the prior quarter, or with positive third month employment in the current quarter following zero employment in the previous quarter.

Expansions. These are establishments with positive employment in the third month in both the previous and current quarters, with a net increase in employment over this period.

Closings. These are either establishments with positive third month employment in the previous quarter, with no employment or zero employment reported in the current quarter.

Contractions. These are establishments with positive employment in the third month in both the previous and current quarters, with a net decrease in employment over this period.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
