Business Employment Dynamics in Michigan — Second Quarter 2017

From March 2017 to June 2017, gross job gains in private sector establishments in Michigan totaled 214,607, while gross job losses numbered 198,700, the U.S. Bureau of Labor Statistics reported today. Assistant Commissioner for Regional Operations Charlene Peiffer noted that gross job gains exceeded gross job losses by 15,907. During the previous quarter, gross job gains exceeded gross job losses by 26,681.

Chart 1. Private sector gross job gains and losses in Michigan, June 2012–June 2017, seasonally adjusted

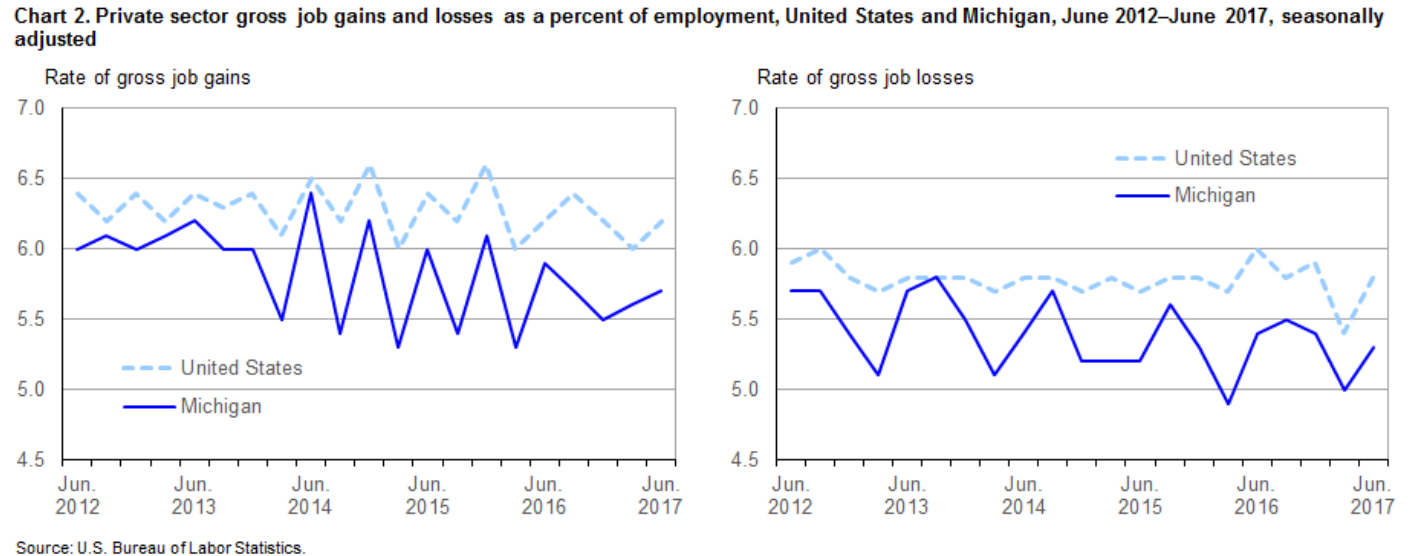

Source: U.S. Bureau of Labor Statistics.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all businesses in the economy. Business Employment Dynamics (BED) statistics track these changes in employment at private business establishments from the third month of one quarter to the third month of the next. Gross job gains are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at opening establishments. Gross job losses are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. The difference between the number of gross job gains and the number of gross job losses is the net change in employment. (See the [Technical Note](#) for more information.).

The 214,607 gross job gains in June 2017 were more than the 211,095 gross job gains in the three-month period ended March 2017. During the past 5 years, gross job gains in Michigan peaked at 225,721 in June 2014 and were at a low of 188,114 in March 2015. The 198,700 gross job losses in the quarter ended June 2017, although larger than seen in the previous quarter, were below the 5-year peak of 203,710 jobs in the quarter ended September 2014. (See [chart 1.](#))

Gross job gains represented 5.7 percent of private sector employment in Michigan in the quarter ended June 2017, while nationally gross job gains accounted for 6.2 percent of private sector employment. (See [chart 2.](#)) Michigan’s rate of gross job gains has been below the national rate each quarter since the quarter ended in December 2011. The rate of gross job losses as a percent of private sector employment in Michigan was 5.3 percent, below the national rate of 5.8 percent in the quarter ended June 2017. Michigan’s rate of gross job losses has been below the national rate each quarter over the past 5 years with one exception.

During the second quarter of 2017, gross job gains exceeded gross job losses in nine industry sectors in Michigan. For example, within manufacturing, gross job gains exceeded gross jobs losses by 4,838. While approximately 17,000 jobs were lost in closing and contracting establishments in the industry, opening and expanding establishments in the three-months ended in June 2017 created almost 22,000 jobs. In construction, nearly 18,000 jobs were created in opening and expanding establishments and almost 14,000 jobs were lost in closing and contracting establishments resulting in a net employment gain of 3,956. The financial activities sector had a net gain of more than 2,000 jobs during the second quarter of 2017. (See [table 1.](#)) In six industry sectors, gross job gains exceeded gross job losses by less than 2,000 in each.

In contrast, gross job losses exceeded gross job gains in two industry sectors. Leisure and hospitality and wholesale trade each had net employment losses that were less than 500.

All states in the East North Central Census division, including Michigan, had gross job gains that exceeded gross job losses in the quarter ended June 2017. (See [table A.](#)) All five states in the division had rates of gross job gains that were lower than the 6.2-percent national rate and rates of gross job losses that were lower than the 5.8-percent national rate.

Table A. Private sector gross job gains and losses for the United States, East North Central Division, and East North Central states, June 2017, seasonally adjusted

Area	Gross job gains		Gross job losses		Net change	Net change as a percent of total employment
	Total	As a percent of total employment	Total	As a percent of total employment

Footnotes:

(1) Data were calculated for this release using published gross job gains and gross job losses for states located in the East North Central Census Division.

Note: Dash indicates data not available.

Additional statistics and other information

BED data for the states have been included in [table 2](#) of this release. For more information on the Business Employment Dynamics data, visit the BED web site at www.bls.gov/bdm.

The Business Employment Dynamics for third quarter 2017 are scheduled to be released on Wednesday, April 25, 2018.

Technical Note

The Business Employment Dynamics (BED) data are a product of a federal-state cooperative program known as Quarterly Census of Employment and Wages (QCEW), or the ES-202 program. The BED data are compiled from existing QCEW records. The QCEW reports are sent by the State Employment Security Agencies (SESAs) to BLS and form the basis of the Bureau's QCEW program and establishment universe sampling frame. These reports are also used to produce the QCEW data on total employment and wages. Other important Bureau uses of the QCEW reports are in the Current Employment Statistics (CES) program. The CES program produces monthly estimates of employment, net changes, and earnings by detailed industry.

In the BED program, the QCEW records are linked across quarters to provide a longitudinal history for each establishment. The linkage process allows the tracking of net employment changes at the establishment level, which in turn allows the estimation of jobs gained at opening and expanding establishments and jobs lost at closing and contracting establishments.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all businesses in the economy. BED statistics track these changes in employment at private business establishments from the third month of one quarter to the third month of the next. Gross job gains are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at opening establishments. Gross job losses are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. The difference between the number of gross jobs gained and the number of gross jobs lost is the net change in employment.

Gross job gains and gross job losses are expressed as rates by dividing their levels by the average of employment in the current and previous quarters. The rates are calculated for the components of gross job gains and gross job losses and then summed to form their respective totals. These rates can be added and subtracted just as their levels can. For instance, the difference between the gross job gains rate and the gross job losses rate is the net growth rate.

The formal definitions of employment changes are as follows:

Openings. These are either establishments with positive third month employment for the second time in the current quarter, with no links to the prior quarter, or with positive third month employment in the current quarter following zero employment in the previous quarter.

Expansions. These are establishments with positive employment in the third month in both the previous and current quarters, with a net increase in employment over this period.

Closings. These are either establishments with positive third month employment in the previous quarter, with no employment or zero employment reported in the current quarter.

Contractions. These are establishments with positive employment in the third month in both the previous and current quarters, with a net decrease in employment over this period.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
