Consumer Price Index, Minneapolis-St. Paul-Bloomington — March 2019

Local prices up 2.3 percent over the year

The Consumer Price Index for All Urban Consumers (CPI-U) in the Minneapolis-St. Paul-Bloomington area rose 1.4 percent from January to March, the U.S. Bureau of Labor Statistics reported today. Assistant Commissioner for Regional Operations Charlene Peiffer noted that the food index rose 0.5 percent and the energy index increased 8.2 percent over the bi-monthly period. The index for all items less food and energy increased 1.1 percent from January to March. Among the indexes within the all items less food and energy category, prices were higher for new and used motor vehicles, shelter, and medical care. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect the impact of seasonal influences.)

Over the past 12 months, the Minneapolis all items CPI-U increased 2.3 percent. (See table A.) The food index rose 1.1 percent while the energy index declined 0.6 percent from March 2018 to March 2019. The index for all items less food and energy rose 2.7 percent over the year. (See table 1.)

Food
Food prices increased 0.5 percent from January to March. Of the two components within the food index, prices for food at home (groceries) rose 0.7 percent and prices for food away from home (restaurant, cafeteria, and vending purchases) increased 0.2 percent over the bi-monthly period.

Over the year, food prices in the Minneapolis area were up 1.1 percent. Prices for groceries increased 0.4 percent, while food away from home prices rose 1.9 percent from March 2018.

Energy
The energy index for Minneapolis was 8.2 percent higher from January to March. Gasoline prices increased 19.5 percent for the bi-monthly period. Utility (piped) gas service costs and electricity costs were down 10.0 percent and 0.2 percent, respectively, during the same period.

From March 2018 to March 2019, overall energy prices declined 0.6 percent. Utility (piped) gas service costs decreased 6.9 percent and gasoline prices declined 0.8 percent over the year. Electricity costs increased 4.0 percent from March 2018.

All items less food and energy
The index for all items less food and energy increased 1.1 percent from January to March. Among the index’s components, prices were higher for new and used motor vehicles (4.4 percent), shelter (0.7 percent), and medical care (1.5 percent).
Over the year, the index for all items less food and energy rose 2.7 percent. Increases in the indexes for shelter (3.7 percent), medical care (5.4 percent), and new and used motor vehicles (4.1 percent) were contributing factors.

The May 2019 Consumer Price Index for Minneapolis is scheduled to be released on Wednesday, June 12, 2019.

Technical Note

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 93 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 29 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 75 urban areas across the country from about 5,000 housing units and approximately 22,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from $10 in 1982-84 to $11.65. For further details see the CPI home page on the Internet at www.bls.gov/cpi and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at www.bls.gov/opub/hom/pdf/homch17.pdf.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater
volatility than the national index, although their long-term trends are quite similar. Note: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.

The Minneapolis-St. Paul-Bloomington, MN-WI, Core Based Statistical Area covered in this release is comprised of Anoka, Carver, Chisago, Dakota, Hennepin, Isanti, LeSueur, Mille Lacs, Ramsey, Scott, Sherburne, Sibley, Washington, and Wright Counties and Pierce and St. Croix Counties in Wisconsin.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
