## **Consumer Price Index, Minneapolis-St. Paul-Bloomington — July 2020**

**Area prices edged down 0.1 percent over the past two months, declined 0.3 percent from a year ago**

Prices in the Minneapolis-St. Paul-Bloomington area, as measured by the Consumer Price Index for All Urban Consumers (CPI-U), edged down 0.1 percent for the two months ending in July 2020, the U.S. Bureau of Labor Statistics reported today. Acting Regional Commissioner Bryan Droste noted that prices were lower over the two-month period for recreation and apparel. Price increases were noted in both the food index and the energy index. (Data in this report are not seasonally adjusted. Accordingly, bi-monthly changes may reflect seasonal influences.)

Over the last 12 months, the CPI-U decreased 0.3 percent. (See [table A](#).) Energy prices fell 12.3 percent, largely the result of a decrease in the price of gasoline. The index for all items less food and energy was unchanged over the year. Food prices rose 3.8 percent. (See [table 1](#).)

### **Food**

Food prices rose 0.4 percent for the two months ending in July. Prices for food at home (groceries) edged down 0.1 percent, and prices for food away from home (restaurant, cafeteria, and vending purchases) rose 1.2 percent for the same period.

Over the year, food prices rose 3.8 percent. Prices for food at home increased 3.3 percent since a year ago, and prices for food away from home advanced 4.4 percent.

### **Energy**

The energy index jumped 10.3 percent for the two months ending in July. The increase was mainly due to higher prices for gasoline (17.9 percent). Prices for electricity rose 8.7 percent, while prices for utility (piped) gas service decreased 4.2 percent for the same period.

Energy prices fell 12.3 percent over the year, largely due to lower prices for gasoline (-22.6 percent). Prices paid for electricity increased 0.9 percent, while prices for utility (piped) gas service decreased 3.8 percent during the past year.

### **All items less food and energy**

The index for all items less food and energy declined 0.8 percent in the latest two-month period. Lower prices for recreation (-14.8 percent) and apparel (-2.2 percent) were partially offset by higher prices for household furnishings and operations (3.2 percent) and shelter (0.2 percent).

Over the year, the index for all items less food and energy was unchanged. Within all items less food and energy, prices were higher for shelter (3.4 percent) and medical care (2.5 percent), while prices were lower for recreation (-15.5 percent).

**Table A. Minneapolis-St. Paul-Bloomington, MN-WI, CPI-U 2-month and 12-month percent changes, all items index, not seasonally adjusted**

Month	2018		2019		2020	
	2-month	12-month	2-month	12-month	2-month	12-month
January.....	0.3		0.4	1.4	0.6	3.0
March .....	0.5		1.4	2.3	-0.3	1.2
May.....	1.0		1.0	2.3	-0.1	0.0
July .....	0.3		0.3	2.2	-0.1	-0.3
September.....	0.3		-0.2	1.7		
November.....	-1.2	1.3	-0.2	2.8		

**The September 2020 Consumer Price Index for Minneapolis is scheduled to be released on Tuesday, October 13, 2020.**

### **Coronavirus (COVID-19) Pandemic Impact on July 2020 Consumer Price Index Data**

Data collection by personal visit for the Consumer Price Index (CPI) program has been suspended since March 16, 2020. When possible, data normally collected by personal visit were collected either online or by phone. Additionally, data collection in July was affected by the temporary closing or limited operations of certain types of establishments. These factors resulted in an increase in the number of prices considered temporarily unavailable and imputed.

While the CPI program attempted to collect as much data as possible, many indexes are based on smaller amounts of collected prices than usual, and a small number of indexes that are normally published were not published this month. Additional information is available at [www.bls.gov/covid19/effects-of-covid-19-pandemic-on-consumer-price-index.htm](http://www.bls.gov/covid19/effects-of-covid-19-pandemic-on-consumer-price-index.htm).

### **Technical Note**

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 93 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 29 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 75 urban areas across the country from about 5,000 housing units and approximately

22,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at [www.bls.gov/cpi](http://www.bls.gov/cpi) and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at [www.bls.gov/opub/hom/pdf/homch17.pdf](http://www.bls.gov/opub/hom/pdf/homch17.pdf).

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **Note: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The **Minneapolis-St. Paul-Bloomington, MN-WI, Core Based Statistical Area** covered in this release is comprised of Anoka, Carver, Chisago, Dakota, Hennepin, Isanti, LeSueur, Mille Lacs, Ramsey, Scott, Sherburne, Sibley, Washington, and Wright Counties in Minnesota; and Pierce and St. Croix Counties in Wisconsin.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
