## Consumer Price Index, Detroit-Warren-Dearborn area – December 2021

Area prices were up 1.1 percent over the past two months, up 7.0 percent from a year ago

Prices in the Detroit-Warren-Dearborn area, as measured by the Consumer Price Index for All Urban Consumers (CPI-U), increased 1.1 percent for the two months ending in December 2021, the U.S. Bureau of Labor Statistics reported today. (See [table A](#).) Regional Commissioner Jason Palmer noted that food prices increased 1.6 percent, and the energy index declined 1.1 percent from October to December. The all items less food and energy index rose 1.2 percent over the past two months due to increases in the categories for shelter, used cars and trucks, household furnishings and operations, and recreation. (Data in this report are not seasonally adjusted. Accordingly, bi-monthly changes may reflect seasonal influences.)

**Chart 1. Over-the-year percent change in CPI-U, Detroit-Warren-Dearborn, MI, December 2018–December 2021**

Source: U.S. Bureau of Labor Statistics.

Over the last 12 months, the CPI-U advanced 7.0 percent. (See [chart 1](#) and [table A](#).) The index for all items less food and energy increased 5.0 percent over the year. Energy prices advanced 27.4 percent, largely the result of an increase in the price of gasoline. Food prices increased 9.6 percent. (See [table 1](#).)

## Food

Food prices rose 1.6 percent for the two months ending in December. (See [table 1.](#)) Prices for food at home (groceries) increased 0.9 percent, and prices for food away from home (restaurant, cafeteria, and vending purchases) advanced 2.5 percent for the same period.

Over the year, food prices increased 9.6 percent. Prices for food at home rose 10.0 percent since a year ago, and prices for food away from home increased 9.1 percent.

## Energy

The energy index decreased 1.1 percent for the two months ending in December. The decrease was mainly due to lower prices for electricity (-4.2 percent). Prices for utility (piped) gas service rose 2.5 percent, while prices for gasoline decreased 0.8 percent for the same period.

Energy prices increased 27.4 percent over the year, largely due to higher prices for gasoline (54.8 percent). Prices paid for utility (piped) gas service advanced 17.7 percent, and prices for electricity rose 2.1 percent during the past year.

## All items less food and energy

The index for all items less food and energy advanced 1.2 percent in the latest two-month period. Higher prices for shelter (2.0 percent), used cars and trucks (6.4 percent), household furnishings and operations (2.3 percent), and recreation (2.3 percent) were partially offset by lower prices for apparel (-1.6 percent) and other goods and services (-0.4 percent).

Over the year, the index for all items less food and energy increased 5.0 percent. Components contributing to the increase included shelter (7.2 percent) and used cars and trucks (37.9 percent). Partly offsetting the increases were price decreases in apparel (-4.1 percent).

**Table A. Detroit-Warren-Dearborn, MI, CPI-U 2-month and 12-month percent changes, all items index, not seasonally adjusted**

**The February 2022 Consumer Price Index for the Detroit-Warren-Dearborn area is scheduled to be released on Thursday, March 10, 2022.**

## **Coronavirus (COVID-19) Pandemic Impact on December 2021 Consumer Price Index Data**

Data collection by personal visit for the Consumer Price Index (CPI) program has been suspended almost entirely since March 16, 2020. When possible, data normally collected by personal visit were collected either online or by phone. Additionally, data collection in December was affected by the temporary closing or limited operations of certain types of establishments. These factors resulted in an increase in the number of prices considered temporarily unavailable and imputed.

While the CPI program attempted to collect as much data as possible, many indexes are based on smaller amounts of collected prices than usual, and a small number of indexes that are normally published were not published this month.

For each month from March 2020 to December 2021, BLS has published a summary of the impact of the pandemic on the Consumer Price Index news release and data. The impact summary for December is available at [www.bls.gov/covid19/consumer-price-index-covid19-impacts-december-2021.htm](http://www.bls.gov/covid19/consumer-price-index-covid19-impacts-december-2021.htm). Beginning with publication of January 2022 data in February 2022, this month-specific impact summary will be discontinued. However, information related to the impact of the pandemic will continue to be available at [www.bls.gov/covid19/effects-of-covid-19-pandemic-on-consumer-price-index.htm](http://www.bls.gov/covid19/effects-of-covid-19-pandemic-on-consumer-price-index.htm).

### **Technical Note**

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 93 percent of the total U.S. population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers approximately 29 percent of the total U.S. population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 75 urban areas across the country from about 6,000 housing units and approximately 22,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date; for most of the CPI-U the reference base is 1982-84 equals 100. An increase of 7 percent from the reference base, for example, is shown as 107.000. Alternatively, that relationship can also be expressed as the price of a base period market basket of goods and services rising from \$100 to \$107. For further details see the CPI home page on the Internet at [www.bls.gov/cpi](http://www.bls.gov/cpi) and the CPI section of the BLS Handbook of Methods available on the internet at [www.bls.gov/opub/hom/cpi/](http://www.bls.gov/opub/hom/cpi/).

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **NOTE: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The **Detroit-Warren-Dearborn, MI, Core Based Statistical Area** covered in this release is comprised of Lapeer, Livingston, Macomb, Oakland, St. Clair, and Wayne Counties in Michigan.

Information in this release will be made available to individuals with sensory impairments upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
