Changing Compensation Costs in the Boston Metropolitan Area — March 2018

Total compensation costs for private industry workers increased 2.0 percent in the Boston-Worcester-Manchester, Mass.-N.H. metropolitan area for the 12-month period ending March 2018, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Deborah A. Brown noted that one year ago, Boston experienced an annual gain of 2.6 percent in total compensation costs. Locally, wages and salaries, the largest component of total compensation costs, advanced at a 1.7-percent pace for the 12-month period ended March 2018. Nationwide total compensation costs rose 2.8 percent, and wages and salaries increased 2.9 percent over the same period. (See [chart 1](#) and [table 1](#).)

Source: U.S. Bureau of Labor Statistics.

Boston is 1 of 15 metropolitan areas in the United States, and 1 of 3 areas in the Northeast region of the country, for which locality compensation cost data are available. Among these 15-largest areas, five metropolitan areas had both total compensation growth and wage and salary growth that exceeded the U.S. average from March 2017 to March 2018. Over-the-year growth rates in the cost of total compensation ranged from 7.2 percent in Seattle to 1.1 percent in Atlanta during March. Wage and salary annual growth rates ranged from 4.9 percent in San Jose to 1.7 percent in Atlanta and Boston. (See [chart 2](#).)

In comparison to the other metropolitan areas in the Northeast, the annual increase in total compensation costs in Boston (2.0 percent) was below that of New York (2.8 percent) and Philadelphia (2.7 percent). Boston's 1.7-percent gain in wages and salaries during March 2018 was also below that in New York (3.1 percent), and Philadelphia (2.7 percent).

Locality compensation costs are part of the national Employment Cost Index (ECI) which measures quarterly changes in total compensation costs, which include wages, salaries and employer costs for employee benefits. In addition to the 15 locality estimates provided in this release, ECI data for the nation, 4 geographical regions, and 9 geographical divisions are available. (Geographic definitions for the metropolitan areas mentioned in this release are included in the Technical Note.)

In addition to the geographic data, a comprehensive national report is available that provides data by industry, occupational group and union status, as well as for both private and state and local government employees. The report on the ECI and further technical information may be obtained from the U.S. Bureau of Labor Statistics, New England Information Office by calling 617-565-2327. The report is also available on the Internet at www.bls.gov/news.release/eci.toc.htm. Current and historical information for the Bureau programs may be accessed via our regional homepage at <https://www.bls.gov/regions/new-england/home.htm>.

Information from the Employment Cost Index program is available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; TDD message referral phone number: 1-800-877-8339.

The Employment Cost Index for June 2018 is scheduled for release on Tuesday, July 31, 2018, at 8:30 a.m. (EDT).

Technical Note

The Employment Cost Index (ECI) is a measure of the change in the cost of labor, free from the influence of employment shifts among occupations and industries. The total compensation series includes changes in wages and salaries and employer costs for employee benefits.

Wages and salaries are defined as straight-time average hourly earnings or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions, excluding premium pay for overtime, work on weekends and holidays, and shift differentials. Production bonuses, incentive earnings, commission payments, and cost-of-living adjustments are included in straight-time earnings, whereas nonproduction bonuses (such as Christmas or year-end bonuses) are excluded.

Selection of areas

Based on available resources and the existing ECI sample, it was determined that estimates would be published for 14 metropolitan areas. Since the ECI sample sizes by area are directly related to area employment, the areas with the largest private industry employment as of the year 2000 were selected. For each of these areas, 12-month percent changes and associated standard errors were computed for the periods since December 2006. (Note: The Seattle-Tacoma-Olympia area was added to the list in September 2009 to make a total of 15 metropolitan areas.)

The metropolitan area definitions of the 15 published localities are listed below.
