**Consumer Price Index, Miami-Fort Lauderdale – April 2017**  
**Area prices down 0.5 percent over the two months; up 2.8 percent over the year**

The Consumer Price Index for All Urban Consumers (CPI-U) for Miami decreased 0.5 percent over the March-April pricing period, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Janet S. Rankin noted that the all items less food and energy index declined 0.7 percent. Over the two month pricing period, the food index was down 0.2 percent, while the energy index was up 1.8 percent. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect the impact of seasonal influences.)

Over the last 12 months, the CPI-U rose 2.8 percent. The index for all items less food and energy increased 2.4 percent and the energy index advanced 12.1 percent over the year. The food index inched up 0.1 percent since April 2016. (See [chart 1](#) and [table 1](#).)

## Food

The food index edged down 0.2 percent during the March-April pricing period. Prices for food at home declined 1.0 percent, while prices for food away from home increased 1.1 percent over the two months.

Since April 2016, the food index inched up 0.1 percent as a 2.5 percent increase in the food away from home index was largely offset by a 1.5 percent decline in the food at home index.

## Energy

The energy index increased 1.8 percent during the two month pricing period, led by a 3.5-percent increase in motor fuel prices. During this same period, prices for utility (piped) gas service rose 1.7 percent and prices for electricity inched up 0.1 percent.

Over the year, the energy index advanced 12.1 percent, reflecting price increases for motor fuel (14.7 percent), electricity (9.6 percent), and for utility (piped) gas service (5.5 percent).

## All items less food and energy

The index for all items less food and energy declined 0.7 percent during the March-April pricing period. Price increases for apparel (10.3 percent) and recreation (1.8 percent), were partially offset by a price decrease for education and communication (-2.9 percent).

Since April 2016, the index for all items less food and energy advanced 2.4 percent, reflecting a 4.0 percent increase in the shelter index and a 10.5 percent increase in the medical care index.

**Table A. Miami CPI-U 2-month and 12-month percent changes, all items index, not seasonally adjusted**

Month	2013		2014		2015		2016		2017

**The Consumer Price Index for May 2017 is scheduled to be released on Wednesday, June 14, 2017.**

## Technical Note

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 89 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 28 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 87 urban areas across the country from about 6,000 housing units and approximately 24,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at [www.bls.gov/cpi](http://www.bls.gov/cpi) and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at [www.bls.gov/opub/hom/pdf/homch17.pdf](http://www.bls.gov/opub/hom/pdf/homch17.pdf).

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **NOTE: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The **Miami-Fort Lauderdale, FL** consolidated area covered in this release is comprised of Broward and Miami-Dade Counties in Florida.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
