Business Employment Dynamics in Texas – First Quarter 2020

From December 2019 to March 2020, **gross job gains** from opening and expanding private-sector establishments in Texas totaled 544,673, while **gross job losses** from closing and contracting private-sector establishments numbered 598,020, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Michael Hirniak noted that the 598,020 gross job losses were the largest quarterly gross job loss in the state since the first quarter of 2009. During the first quarter of 2020, the difference between the number of gross job gains and the number of gross job losses yielded a **net employment loss** of 53,347 jobs in the private sector. During the previous quarter, gross job gains exceeded gross job losses by 97,951. (See [chart 1.](#))

Chart 1. Private sector gross job gains and losses in Texas, March 2015–March 2020 by quarter, seasonally adjusted

Source: U.S. Bureau of Labor Statistics.

Note: Shaded area represents NBER defined recession period.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all private businesses in the economy. Business Employment Dynamics (BED) statistics track these changes in employment at private-sector establishments from the third month of one quarter to the third month of the next. The difference between the number of gross job gains and the number of gross job losses is the net change in employment. (See [Technical Note.](#))

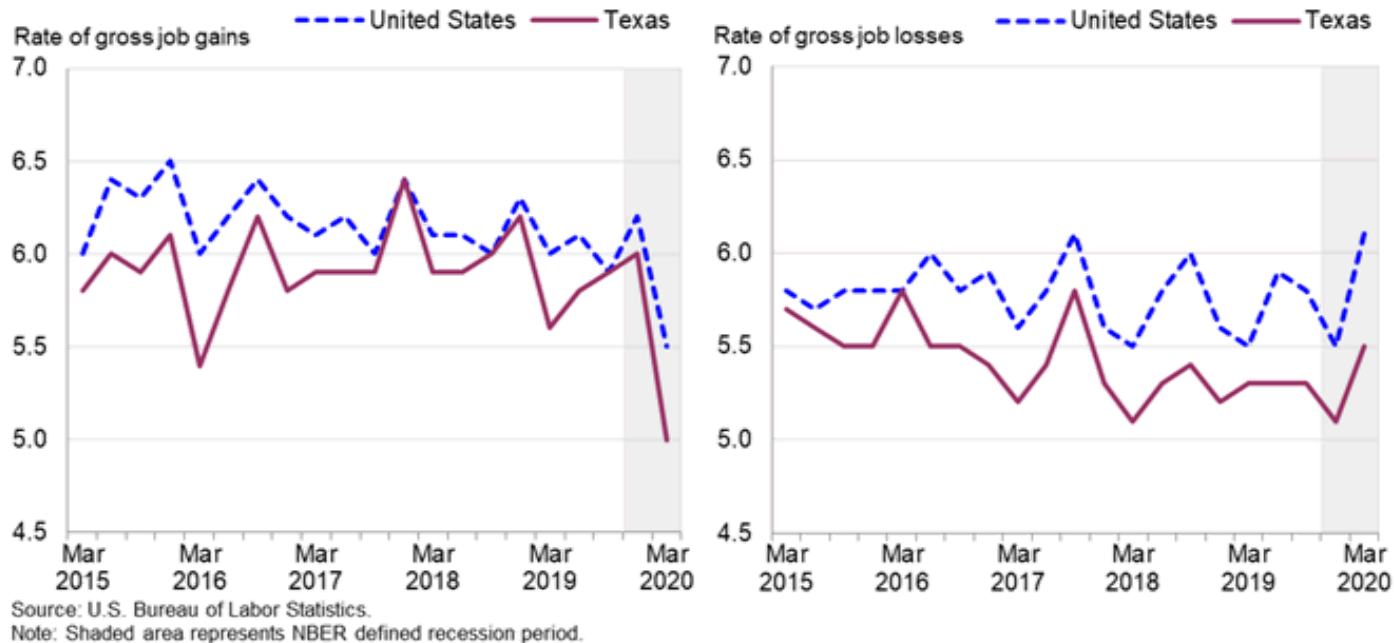

Gross job gains

In the first quarter of 2020, gross job gains represented 5.0 percent of private-sector employment in Texas; nationally, gross job gains accounted for 5.5 percent of private-sector employment. (See [chart 2.](#)) Gross job gains are the sum of increases in employment due to expansions at existing establishments and the addition of new jobs at opening establishments. In Texas, gross job gains at **expanding** establishments totaled 445,176 in the first quarter of 2020, a decrease of 80,248 jobs compared to the previous quarter. (See [table 1.](#)) **Opening** establishments accounted for 99,497 jobs gained in the first quarter of 2020, a decrease of 21,180 jobs from the previous quarter.

Gross job losses

In the first quarter of 2020, gross job losses represented 5.5 percent of private-sector employment in Texas. Nationally, gross job losses accounted for 6.1 percent of private-sector employment. (See [chart 2.](#)) Gross job losses are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. In Texas, **contracting** establishments lost 507,104 jobs in the first quarter of 2020, an increase of 57,251 jobs from the prior quarter. **Closing** establishments lost 90,916 jobs, a decrease of 7,381 jobs from the previous quarter.

Chart 2. Private sector gross job gains and losses as a percent of employment, United States and Texas, March 2015–March 2020, seasonally adjusted

Industries

During the first quarter of 2020, gross job losses exceeded gross job gains in 7 of the 11 industry sectors in Texas. Leisure and hospitality had the largest over-the-quarter net job decrease, with a loss of 39,734 jobs. This was the result of 118,134 gross job losses and 78,400 gross job gains. The transportation and warehousing sector had a net loss of 13,346 jobs. Education and health services saw a net gain of 2,732 jobs, the largest of any sector in the state. Texas's financial activities sector had a net gain of 1,845 jobs.

For more information

The BED data series include gross job gains and gross job losses by industry subsector, for the 50 states, the District of Columbia, Puerto Rico, and the Virgin Islands, as well as gross job gains and gross job losses at the firm level by employer size class. BED data for the states have been included in [table 2](#) of this release. Additional information is available online at www.bls.gov/bdm/.

Coronavirus (COVID-19) Effect on First Quarter 2020 Business Employment Dynamics

Data collection and processing methods have been impacted because of the COVID-19 pandemic. More detail can be found at www.bls.gov/covid19/effects-of-covid-19-pandemic-on-business-employment-dynamics.htm.

Technical Note

The Business Employment Dynamics (BED) data are a product of a federal-state cooperative program known as Quarterly Census of Employment and Wages (QCEW). The BED data are compiled by the U.S. Bureau of Labor Statistics (BLS) from existing QCEW records. Most employers in the U.S. are required to file quarterly reports on the employment and wages of workers covered by unemployment insurance (UI) laws, and to pay quarterly UI taxes. The QCEW is based largely on quarterly UI reports which are sent by businesses to the State Workforce Agencies (SWAs). These UI reports are supplemented by two additional BLS data collections to render administrative data into economic statistics. Together these data comprise the QCEW and form the basis of the Bureau's establishment universe sampling frame.

In the BED program, the QCEW records are linked across quarters to provide a longitudinal history for each establishment. The linkage process allows the tracking of net employment changes at the establishment level, which in turn allows the estimation of jobs gained at opening and expanding units and jobs lost at closing and contracting units.

The change in the number of jobs over time is the net result of increases and decreases in employment that occur at all businesses in the economy. BED statistics track these changes in employment at private business establishments from the third month of one quarter to the third month of the next. Gross job gains are the sum of increases in employment from expansions at existing establishments and the addition of new jobs at opening establishments. Gross job losses are the result of contractions in employment at existing establishments and the loss of jobs at closing establishments. The difference between the number of gross jobs gained and the number of gross jobs lost is the net change in employment.

Gross job gains and gross job losses are expressed as rates by dividing their levels by the average of employment in the current and previous quarters. The rates are calculated for the components of gross job gains and gross job losses and then summed to form their respective totals. These rates can be added and subtracted just as their levels can. For instance, the difference between the gross job gains rate and the gross job losses rate is the net growth rate.

The formal definitions of employment changes are as follows:

Openings. These are either units with positive third month employment for the first time in the current quarter, with no links to the prior quarter, or with positive third month employment in the current quarter following zero employment in the previous quarter.

Expansions. These are units with positive employment in the third month in both the previous and current quarters, with a net increase in employment over this period.

Closings. These are either units with positive third month employment in the previous quarter, with no employment or zero employment reported in the current quarter.

Contractions. These are units with positive employment in the third month in both the previous and current quarters, with a net decrease in employment over this period.

The full Technical Note for the Business Employment Dynamics program, which includes information on coverage, concepts, and methodology, can be found in the current quarterly news release online at www.bls.gov/news.release/cewbd.htm.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
