## **County Employment and Wages in Arizona – Second Quarter 2013**

Employment advanced in one of Arizona's two large counties from June 2012 to June 2013, the U.S. Bureau of Labor Statistics reported today. (Large counties are defined as those with employment of 75,000 or more as measured by 2012 annual average employment.) Regional Commissioner Richard J. Holden noted that Maricopa County experienced job growth of 2.6 percent, while employment in Pima County edged down 0.1 percent over the year.

Nationally, employment increased 1.6 percent from June 2012 to June 2013 as 288 of the 334 largest U.S. counties gained jobs. Fort Bend, Texas, had the largest increase with a gain of 7.0 percent over the year. Atlantic, N.J., had the largest over-the-year decrease with a loss of 4.5 percent.

Among the state's two large counties, employment was higher in Maricopa County (1,678,700) in June 2013. Together, Arizona's two large counties accounted for 82.9 percent of total employment within the state. Nationwide, the 334 large counties made up 71.4 percent of total U.S. employment. (See [table 1](#).)

Employment and wage levels (but not over-the-year changes) are also available for the 13 counties in Arizona with employment below 75,000. All but one of these smaller counties had average weekly wages below the national average. (See [table 2](#))

### **Large county wage changes**

Average weekly wages in Pima County increased 2.3 percent over the year from the second quarter of 2012 and ranked 98th among the 334 largest U.S. counties. Maricopa's County's 1.5-percent wage growth ranked 197th nationally. (See [table 1](#).) Nationwide, 304 large counties had over-the-year increases in average weekly wages in the second quarter of 2013. Union, N.J., ranked first with an increase of 8.1 percent. San Mateo, Calif., ranked second with a gain of 8.0 percent, followed by the counties of Williamson, Tenn. (7.8 percent), Rockingham, N.H. (6.9 percent), and Dane, Wis. (6.0 percent).

Among the 334 largest counties, 18 experienced over-the-year decreases in average weekly wages. Davidson, Tenn., had the largest decrease (-2.2 percent), followed by Whatcom, Wash. (-1.5 percent). Washington, Ore., and Shelby, Tenn., tied for the third largest percentage decrease (-1.3 percent). El Paso, Colo., and Wyandotte, Kan., tied for the fifth largest percentage decrease (-1.1 percent).

## **Large county average weekly wages**

Maricopa County's \$919 average weekly wage placed in the top third among the 334 large U.S. counties, ranking 110th. At \$812 per week, Pima County's average weekly wage placed 201st. Nationally, weekly wages were higher than average in 107 of the 334 largest counties. Santa Clara, Calif., held the top position with an average weekly wage of \$1,810. New York, N.Y., was second at \$1,675, followed by San Mateo, Calif. (\$1,632) and Washington, D.C. (\$1,575).

There were 227 large counties with an average weekly wage below the U.S. average in the second quarter of 2013, Horry, S.C. (\$537) reported the lowest wage, followed by the counties of Cameron, Texas (\$572), Hidalgo, Texas (\$592), Yakima, Wash. (\$629), and Lake, Fla. (\$633).

## **Average weekly wages in Arizona's smaller counties**

Of the 13 counties in Arizona with employment below 75,000, only Greenlee (\$1,093) had an average wage above the national average of \$921. La Paz County reported the lowest wage in the state with an average of \$629 in the second quarter of 2013. (See [table 2.](#))

When all 15 counties in Arizona were considered, all but 1 had wages below the national average. Four counties reported average weekly wages under \$700, six had wages from \$700 to \$799, three reported wages from \$800 to \$899, and two had wages of \$900 or more. (See [chart 1.](#))

## **Additional statistics and other information**

Quarterly data for states have been included in this release in table 3. For additional information about quarterly employment and wages data, please read the Technical Note or visit the QCEW Web site at [www.bls.gov/cew/](http://www.bls.gov/cew/).

*Employment and Wages Annual Averages Online* features comprehensive information by detailed industry on establishments, employment, and wages for the nation and all states. The 2012 edition of this publication, which was published in September 2013, contains selected data produced by Business Employment Dynamics (BED) on job gains and losses, as well as selected data from the first quarter 2013 version of the national news release. Tables and additional content from *Employment and Wages Annual Averages 2012* are now available online at <https://www.bls.gov/cew/publications/employment-and-wages-annual-averages/2012/home.htm>. The 2013 edition of *Employment and Wages Annual Averages Online* will be available in September 2014.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 1-800-877-8339.

## **Technical Note**

Average weekly wage data by county are compiled under the Quarterly Census of Employment and Wages (QCEW) program, also known as the ES-202 program. The data are derived from summaries of employment and total pay of workers covered by state and federal unemployment insurance (UI) legislation and provided by State Workforce Agencies (SWAs). The 9.2 million employer reports cover 135.1 million full- and part-time workers. The average weekly wage values are calculated by dividing quarterly total wages by the average of the three monthly employment levels of those covered by UI programs. The result is then divided by 13, the number of weeks in a quarter. It is to be noted, therefore, that over-the-year wage changes for geographic areas may reflect shifts in the composition of employment by industry, occupation, and such other factors as hours of work. Thus, wages may vary among counties, metropolitan areas, or states for reasons other than changes in

the average wage level. Data for all states, Metropolitan Statistical Areas (MSAs), counties, and the nation are available on the BLS Web site at [www.bls.gov/cew/](http://www.bls.gov/cew/); however, data in QCEW press releases have been revised and may not match the data contained on the Bureau's Web site.

QCEW data are not designed as a time series. QCEW data are simply the sums of individual establishment records reflecting the number of establishments that exist in a county or industry at a point in time. Establishments can move in or out of a county or industry for a number of reasons—some reflecting economic events, others reflecting administrative changes.

The preliminary QCEW data presented in this release may differ from data released by the individual states as well as from the data presented on the BLS Web site. These potential differences result from the states' continuing receipt, review and editing of UI data over time. On the other hand, differences between data in this release and the data found on the BLS Web site are the result of adjustments made to improve over-the-year comparisons. Specifically, these adjustments account for administrative (noneconomic) changes such as a correction to a previously reported location or industry classification. Adjusting for these administrative changes allows users to more accurately assess changes of an economic nature (such as a firm moving from one county to another or changing its primary economic activity) over a 12-month period. Currently, adjusted data are available only from BLS press releases.
