Consumer Price Index, Honolulu – Second Half 2014

Area prices were up 1.3 percent over the past six months, up 1.8 percent from a year ago

Prices in the Honolulu Area, as measured by the Consumer Price Index for All Urban Consumers (CPI-U), advanced 1.3 percent in the second half of 2014, the U.S. Bureau of Labor Statistics reported today. (See [table A.](#)) Regional Commissioner Richard J. Holden noted that the January increase was influenced by higher prices for shelter and food. (Data in this report are not seasonally adjusted. Accordingly, six-month-to-six-month changes may reflect seasonal influences.)

Over the last 12 months, the CPI-U rose 1.8 percent. (See [chart 1](#) and [table A.](#)) The energy index was unchanged as higher electricity prices largely offset lower gasoline prices. The index for all items less food and energy advanced 1.7 percent over the year. (See [table 1.](#))

**Chart 1. Over-the-year percent change in CPI-U, Honolulu,
First half 2011 - Second half 2014**

Source: U.S. Bureau of Labor Statistics.

Food

Food prices rose 2.5 percent in the second half of 2014. (See [table 1](#).) Prices for food at home advanced 2.4 percent, and prices for food away from home advanced 2.4 percent for the same period.

Over the year, food prices increased 3.2 percent. Prices for food at home rose 4.1 percent since a year ago, and prices for food away from home advanced 3.0 percent.

Energy

The energy index decreased 2.5 percent since the first half of 2014. The decrease was mainly due to lower prices for gasoline (-4.0 percent). Prices for natural gas service decreased 3.2 percent, and prices for electricity declined 0.6 percent for the same period.

Energy prices were unchanged over the year. Prices paid for gasoline declined 2.6 percent, while electricity prices rose 2.4 percent and natural gas prices advanced 2.2 percent.

All items less food and energy

The index for all items less food and energy advanced 1.4 percent in the latest six-month period. Higher prices for other goods and services (3.5 percent), education and communication (2.1 percent), and shelter (1.8 percent) were partially offset by lower prices for apparel (-2.0 percent).

Over the year, the index for all items less food and energy advanced 1.7 percent. Components contributing to the increase included other goods and services (4.0 percent), education and communication (3.1 percent), and shelter (1.8 percent). Partly offsetting the increases were price declines in apparel (-7.3 percent) and household furnishings and operations (-0.4 percent).

Table A. Honolulu CPI-U semi-annual and annual percent changes (not seasonally adjusted)

Month	2009		2010		2011		2012		2013		2014	
	Semi-annual	Annual	Semi-annual	Annual	Semi-annual	Annual	Semi-annual	Annual	Semi-annual	Annual	Semi-annual	Annual
First Half	-1.0	0.3	0.8	2.5	2.5	3.5	1.3	2.8	1.2	1.8	0.5	1.1
Second Half	1.7	0.7	0.9	1.7	1.4	4.0	0.7	2.0	0.6	1.7	1.3	1.8

The first half of 2015 Consumer Price Index for the Honolulu is scheduled to be released on August 19, 2015.

Technical Note

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 89 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 28 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 87 urban areas across the country from about 4,000 housing units and approximately 26,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at www.bls.gov/cpi and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at www.bls.gov/opub/hom/homch17_a.htm.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **NOTE: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The Honolulu metropolitan area covered in this release consists of Oahu County in the State of Hawaii.
