Fatal Work Injuries in the Los Angeles Area – 2013

Fatal work injuries totaled 102 in 2013 for the Los Angeles-Long Beach-Santa Ana, Calif. Metropolitan Statistical Area, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Richard J. Holden noted that while the 2013 count was preliminary, the number of work-related fatalities in the Los Angeles area increased by 7 over the year. Fatal occupational injuries in the area have ranged from a high of 149 in 2006 to low of 84 in 2010. (See [chart 1.](#))

Nationwide, a preliminary total of 4,405 fatal work injuries were recorded in 2013, down from a revised count of 4,628 fatalities in 2012, according to results from the Census of Fatal Occupational Injuries (CFOI) program. Final 2013 CFOI data will be released in the late spring of 2015.

Chart 1. Total fatal occupational injuries, Los Angeles-Long Beach-Santa Ana, 2004–2013

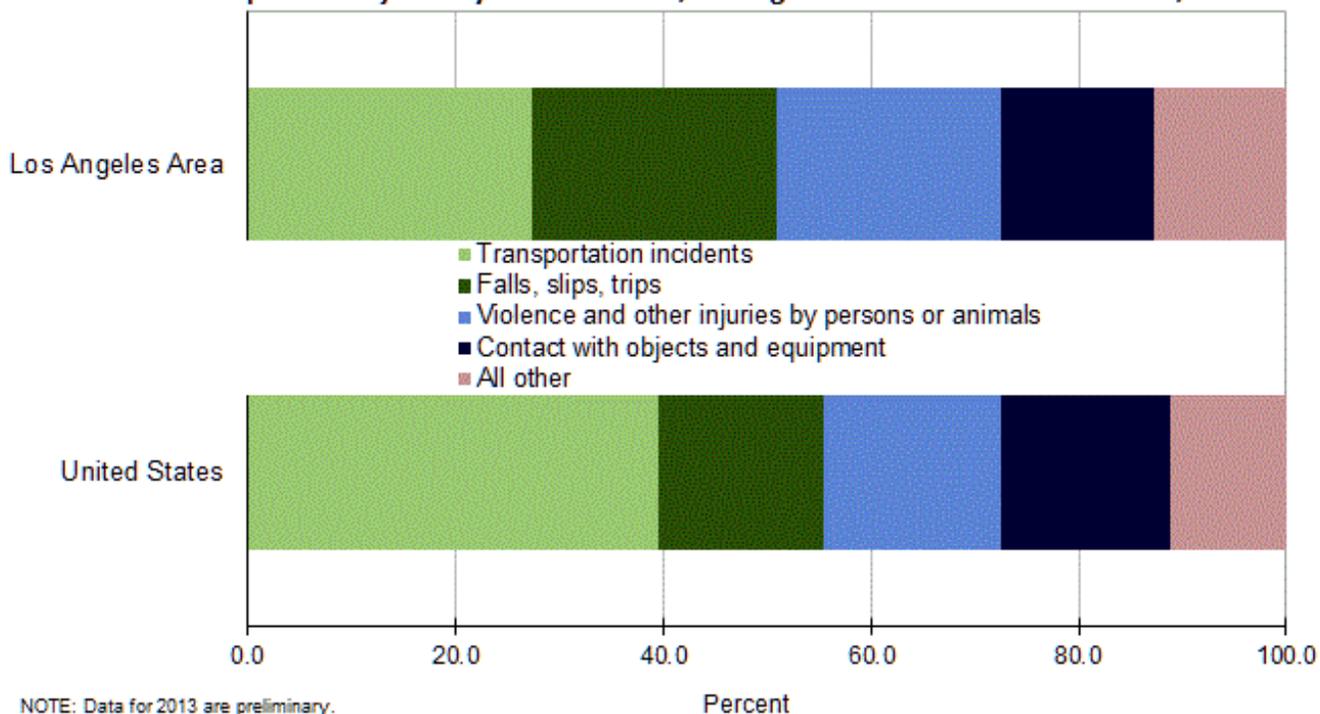

NOTE: Data for 2013 are preliminary.
SOURCE: U.S. Bureau of Labor Statistics.

Of the 102 fatal work injuries reported in the Los Angeles area in 2013, 28 resulted from transportation incidents, 24 from falls, slips, and trips, and 22 from violence and other injuries by persons or animals; together these three major categories accounted for nearly three-quarters of all fatal work injuries. (See [table 1.](#)) Other major event categories each reported 15 or fewer deaths. Within transportation incidents, roadway incidents involving motorized land vehicles was the most frequent type of workplace fatality with 14 deaths. This category accounted for 14 percent of all on-the-job fatalities in the state. The second-largest event in transportation incidents, pedestrian vehicular incidents, accounted for 10 fatalities. In the falls, slips, and trips category, 20 deaths occurred from falling to a lower level, and in the violence and other injuries by persons or animals category, all 22 deaths occurred from intentional injury by a person. (Note that transportation counts presented in this release are expected to rise when updated 2013 data are released in the late spring of 2015 because key source documentation detailing specific transportation-related incidents has not yet been received.)

In the United States, transportation incidents were also the most frequent fatal workplace event in 2013, accounting for 40 percent of fatal work injuries. The Los Angeles area’s 27-percent share of fatalities due to this event was smaller than the nationwide share. (See [chart 2.](#)) Violence and other injuries by persons or animals was the second most frequent type of event nationally, with 17 percent of work-related fatalities; the share in Los Angeles for this event was 22 percent. Contact with objects and equipment and falls, slips, and trips each accounted for 16 percent of the nation’s workplace fatalities. In Los Angeles, these events accounted for 15 and 24 percent of the state’s fatal injuries, respectively.

Chart 2. Fatal occupational injuries by selected event, Los Angeles Area and the United States, 2013

Additional key characteristics:

- The transportation and warehousing industry sector had the largest number of fatalities in the area with 19, compared with 16 in the previous year. (See [table 2.](#)) Transportation incidents accounted for 10 of the worker deaths, while 4 fatalities were due to contact with objects or equipment.

- The construction industry had the second highest fatality count with 18, up from 13 the previous year. Falls, slips, and trips accounted for nine worker deaths in this sector.
- Transportation and material moving occupations had the highest number of fatal work injuries with 24. (See [table 3](#).) More than half of these fatalities were heavy and tractor-trailer truck drivers (13). Workers in construction and extraction occupations had the next highest fatality count at 18.
- Men accounted for 98, or 96 percent, of the work-related fatalities in the area. (See [table 4](#).) Transportation incidents made up over one-fourth of these fatalities.
- In the Los Angeles area, 61 percent of those who died from a workplace injury were Hispanic or Latino. Nationwide, this group accounted for 18 percent of work-related deaths.
- Workers 25-54 years old—the prime working age group—accounted for 75, or 74 percent, of the area’s work-related fatalities in 2013. Nationally, workers in this group accounted for 60 percent of on-the-job fatalities.
- Of the 102 persons that suffered fatal work injuries in the Los Angeles area, 84 percent worked for wages and salaries; the remaining were self-employed. The most frequent fatal event for wage and salary workers was transportation incidents.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the United States during the calendar year. The program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This assures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/homch9.htm.

Federal/State agency coverage. The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Acknowledgments. The Bureau of Labor Statistics appreciates the efforts of all federal, state, local, and private sector entities that submitted source documents used to identify fatal work injuries, in particular the California Department of Industrial Relations.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Area definitions. The substate area data published in this release reflect the standards and definitions established by the U.S. Office of Management and Budget, dated December 2009. A detailed list of the geographic definitions is available at <http://www.bls.gov/lau/lausmsa.htm>.

The **Los Angeles-Long Beach-Santa Ana, Calif. Metropolitan Statistical Area** is composed of Los Angeles and Orange Counties in California.
