## Employer-Reported Workplace Injuries and Illnesses in Hawaii – 2020

Private industry employers reported 10,900 nonfatal workplace injuries and illnesses in Hawaii in 2020, resulting in an incidence rate of 3.0 cases per 100 full-time equivalent workers, the U.S. Bureau of Labor Statistics reported today. (See [table A.](#)) Regional Commissioner Chris Rosenlund noted that Hawaii was among 10 states that had an incidence rate of total recordable cases (TRC) not significantly different from the national rate of 2.7. (See the [Technical Note](#) at the end of this release for more information about the Survey of Occupational Injuries and Illnesses.)

Hawaii's findings from the 2020 Survey of Occupational Injuries and Illnesses include:

- TRC incidence rates in private industry ranged from 1.0 in financial activities to 5.0 in manufacturing. (See [table 1.](#))
- Two supersectors, with 42.3 percent of private industry employment, accounted for 51.4 percent of the occupational injuries and illnesses: trade, transportation, and utilities and education and health services. (See [table 2.](#))
- In private industry, the TRC injury and illness incidence rate ranged from 3.0 for establishments employing 11 to 49 workers to 4.4 for establishments employing 1,000 or more workers. (See [table 3.](#))
- Hawaii's private industry TRC rate of 3.2 in 2020 was not significantly different than the 2019 rate of 3.0. (See [table 4.](#))

**Table A. Number and rate of nonfatal occupational injuries and illnesses in private industry, United States and Hawaii, 2020**

Characteristic	United States		Hawaii	
	Number (in thousands)	Rate <sup>(1)</sup>	Number (in thousands)	Rate <sup>(1)</sup>
Total cases <sup>(2)</sup> .....	2,654.7	2.7	10.9	3.0
Cases with days away from work, job transfer, or restriction .....	1,702.0	1.7	7.5	2.1
Cases with days away from work .....	1,176.3	1.2	6.7	1.9
Cases with job transfer or restriction .....	525.6	0.5	0.8	0.2
Other recordable cases .....	952.7	1.0	3.4	0.9

Footnotes:

(1) Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as:  $(N/EH) \times 200,000$  where N = number of injuries and illnesses; EH = total hours worked by all employees during the calendar year; and 200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).

(2) Excludes farms with fewer than 11 employees.

Note: Due to rounding, components may not add to totals.

### **Private industry injury and illness case types**

Of the 10,900 private industry injury and illness cases reported in Hawaii, 7,500 were of a more severe nature, involving days away from work, job transfer, or restriction—commonly referred to as DART cases. These cases occurred at a rate of 2.1 cases per 100 full-time workers. Eighty-nine percent of the DART cases in Hawaii were incidents that resulted in at least one day away from work, compared to 69.1 percent nationally. Other recordable cases (those not involving days away from work, job transfer, or restriction) accounted for the remaining 3,400 cases in Hawaii, at a rate of 0.9. In comparison, the national rate for other recordable cases was 1.0.

In Hawaii, the trade, transportation, and utilities and leisure and hospitality supersectors had significant decreases in their TRC and DART incidence rates from the previous year. The natural resources and mining supersector had significant increases in its TRC and DART incidence rates from the previous year. The construction supersector had a significant increase in its DART rate since a year ago. No other private industry supersector had a significant change in its TRC or DART rate from the previous year.

In 2020, 9,300 (85.3 percent) of private industry recordable injuries and illnesses were injuries. Workplace illnesses accounted for an additional 1,600 recordable cases.

### **State and local government injury and illness cases**

In the state and local government sector in Hawaii, 1,800 injury and illness cases were reported in 2020, resulting in a rate of 2.4 cases per 100 full-time workers. Nationally, the rate was 3.9. Fifty percent of injuries and illnesses reported in Hawaii's public sector occurred among local government workers.

### **State estimates**

Private industry estimates are available for 41 participating states and for the District of Columbia for 2020. The private industry injury and illness rate was statistically higher in 20 states than the national rate of 2.7 cases per 100 full-time workers, lower in 11 states and in the District of Columbia, and not statistically different in 10 states. (See [chart 1.](#)) Caution should be taken when comparing rates among different states as some differences can be attributed to different industry composition within each state.

### **Coronavirus (COVID-19) Pandemic Impact on the Survey of Occupational Injuries and Illnesses**

Estimates in this news release are for reference year 2019. No changes in estimation procedures or outputs were necessary due to COVID-19. Additional information is available at [www.bls.gov/covid19/effects-of-covid-19-on-workplace-injuries-and-illnesses-compensation-andoccupational-requirements.htm](http://www.bls.gov/covid19/effects-of-covid-19-on-workplace-injuries-and-illnesses-compensation-andoccupational-requirements.htm).

### **Technical Note**

The Survey of Occupational Injuries and Illnesses (SOII) is a Federal/State cooperative program that publishes estimates on nonfatal occupational injuries and illnesses. Each year, approximately 200,000 employers report for establishments in private industry and the public sector (state and local government). In-scope cases include work-related injuries or illnesses to workers who require medical care beyond first aid. See the Occupational Safety and Health Administration (OSHA) for the entire [recordkeeping guidelines](#). The SOII

excludes all work–related fatalities as well as nonfatal work injuries and illnesses to the self–employed, to workers on farms with 10 or fewer employees, to private household workers, to volunteers, and to federal government workers. For more information on the scope and sampling methodology see the [SOII Handbook of Methods](#).

Information in this release will be made available to individuals with sensory impairments upon request. Voice phone: (202)-691-5200; Federal Relay Service: (800)-877-8339.

Footnotes:

(1) Data are coded using the North American Industry Classification System (NAICS). For more information on the version of NAICS used in this year, see our Handbook of Methods concepts page: <https://www.bls.gov/opub/hom/soii/concepts.htm>.

(2) Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as:  $(N/EH) \times 200,000$  where N = number of injuries and illnesses; EH = total hours worked by all employees during the calendar year; and 200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).

(3) Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

(4) Excludes farms with fewer than 11 employees.

(5) Data for mining (Sector 21 in the North American Industry Classification System) include establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in oil and gas extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore, estimates for these industries are not comparable to estimates in other industries.

(6) Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

Note: Due to rounding, components may not add to totals. Dash indicates data not available.
