</tbody>
</table>

¹ Needed value represents the minimum change needed to be statistically significant at a 90% confidence level. These values are based on standard error models that were updated with the release of January 2019 data.

- Standard errors cannot be calculated for population levels. Only the over-the-year change is displayed for series that are not seasonally adjusted.

- Differences published in this table may not match differences published elsewhere due to rounding.

NOTE: Data are seasonally adjusted except where noted. Detail for the seasonally adjusted data shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Updated population controls are introduced annually with the release of January data. The over-the-month changes for January in this table include the effects of population control updates.
