## Work Stoppages

## Caused by

## Labor-Management Disputes in 1948

## Letter of Transmittal

## United States Department of Labor, Bureau of Labor Statistics, Washington, D. C., April 30, 1949.

The Secretary of Labor:
I have the honor to transmit herewith a report on work stoppages caused by labor-management disputes in 1948 a portion of which was printed in the Monthly Labor Review, May 1949.

This report was prepared in the Bureau's Division of Industrial Relations, by Don Q. Crowther, Ann J. Herlihy, and Loretto R. Nolan, under the general supervision of Nelson M. Bortz.

The Bureau wishes to acknowledge the widespread cooperation given by employers, unions, the Federal Mediation and Conciliation Service, and various State agencies in furnishing information on which the statistical data in this report are based.

Ewan Clague, Commissioner.

Hon. Maurice J. Tobin, Secretary of Labor.

## Work Stoppages Caused by Labor-Management Disputes in $1948{ }^{1}$

## Summary

No significant change occurred in the general level of strike activity in 1948. As compared with the preceding year, the number of work stoppages $(3,419)$ declined about 7 percent. Approximately 1,960,000 workers were involved in stoppages, with a recorded idleness of $34,100,000$ man-days. These totals were slightly less than the corresponding totals for 1947.

As in other recent years, wages and related fringe benefits were a major controversial issue and accounted for more than half of the stoppages. Union representation rights, the union shop and hiring hall, and allied issues, some stemming directly or indirectly from application of various provisions of the Labor Management Relations Act, featured other controversies.

Average duration of stoppages declined to 21.8 calendar days in 1948, from 25.6 calendar days in 1947.

## Trend Comparisons

Trend comparisons in strike statistics are difflcult: no two periods are strictly comparable, because of the complex and changing factors that shape the course of labor-management relations. A host of economic forces-production trends, profits, prices, and worker purchasing power, to cite but a few-are at work upon an even more unpredictable human element. Strong convictions, bitter prejudices, and sudden bursts of temper occasionally outweigh economic realities. Also present are the influences of Federal and State governmental policies as interpreted by administrative agencies and by courts.
Comparison of trends following World War II with those after World War I showed generally

[^0]similar tendencies-first a marked rise, followed by sharp declines as pent-up wartime tensions and emotions subsided. By the end of 1948, labor and management had had more than 3 years in which to readjust to peacetime conditions of production and industrial relations. As in the period follow-

1 The exact number of workers involved in some strikes which occurred during the period 1916 to 1926 is not known. The missing information is during the period 1916 to 1926 is not known. The missing information is for the smaller dis
are approximate.
${ }_{2}^{\text {are approximate. }}$ Total employed workers" as used here refers to all workers except those in occupations and professions in which there is little if any union organization or in which strikes rarely, if ever, occur. In most industries it includes all wage and salary workers except those in executive, managerial, or high supervisory positions or those performing professional work the nature of which makes union organization or group action impracticable. It excludes all self-employed, domestic workers, agricultural wage workers on farms employing less than 6, all Federal and State government employees, and officials (both elected and appointed) in local governments.
${ }^{3}$ Estimated working time was computed for purposes of this table by multiplying the average number of employed workers each year by the prevailing number of days worked per employee in that year.
4 Not a vailable.
ing World War I, the number of strikes in the third postwar year (1948) was about a third below the immediate postwar peak. The number of workers involved and the time lost, as in the former period, had declined still further.

Over the 18-month period-July 1947 to December 1948-during which the Labor Management Relations (Taft-Hartley) Act had been in effect, strike activity averaged substantially less than in the period immediately following VJ-day. It averaged higher than in the more normal prewar period of 1935-39, however, in terms of number of strikes, number of workers involved, and time lost. (See chart 1.)

## Review of the Year

Employment reached record levels in 1948. Workers' money wages were high, as were employers' profits. Under these circumstances some employers quickly reached agreement with their workers' representatives rather than risk interruptions of output during a seller's market. Others advocated a withholding of wage increases accompanied by modest price reductions as a means of checking inflation. Among the unions, long-term contractual commitments, no-strike clauses, and apprehension over incurring financial suits or strains on the union treasury served as strike deterrents.

No statistical process can fully and accurately interpret or record these involved motives-some simple in character, others intricate. The play of forces at times brought the parties together, and at other times put them at loggerheads. For example, the General Motors Corp. and the United Automobile, Aircraft and Agricultural Workers (CIO) on the brink of a strike reached a settlement; concurrently, the same union and the Chrysler Corp. failed to agree, causing the plants to be idle for over 2 weeks. A dispute over administration of a pension fund in the bitumi-nous-coal industry caused a 40 -day stoppage; 2 months later the commercial operators and the United Mine Workers (Ind.) reached an agreement on a new contract without any suspension of work. But the management of the so-called "captive" mines would not accept the same terms with regard to the union shop, and a strike ensued. Thousands of packinghouse workers returned to
their jobs after a strike of over 2 months, accepting a wage increase no greater than the amount offered before the walk-out began.

Chart 1. Work Stoppages:
Monthly Averages for Selected Periods

Injunctions and cooling-off periods, prescribed by the Labor Management Relations Act, failed to stem stoppages in maritime and longshore services, but helped to avert an interruption of
work in the atomic energy dispute, which was finally settled through negotiation. ${ }^{2}$ Some strikes arose because of management's alleged refusal to bargain with union officials who did not sign the non-Communist affidavits required by law. At various plants such as the Univis Lens Co. in Dayton, Ohio, violence flared as the workers, members of a noncomplying union-the United Electrical, Radio, and Machine Workers (CIO)sought to negotiate. But in other situations, the union rank and file shifted their affiliation when negotiations were stalemated by refusal of their leaders to sign the affidavits.

Still other stoppages-as in the printing in-dustry-revolved about the preservation of union shop conditions built up over a long period of years. In a relatively few instances, as in other recent years, competition between unions for jurisdiction over a job to be done, or for the right to represent a group of workers, found the employer in the position of affected bystander.

Most labor-management negotiations in 1948, as in preceding years, were concluded without work stoppages. Although complete statistics are not available, it is currently estimated that over 100,000 collective agreements are in effect. Most of these are renegotiated, or reopened, annually.

Many large groups of workers and their employers came to peaceful settlements during 1948. Steel workers, observing their contractual nostrike pledge, first reluctantly accepted a continuance of their existing wage scales, but later obtained, by negotiation, an increase averaging about 13 cents an hour. Several hundred thousand railroad workers, without the almost customary intervention of Government mediation or fact-finding processes, bargained with representatives of the Nation's carriers and secured an upward adjustment of 10 cents an hour. The same process of bargaining and compromise was successfully followed by countless other employers and unions-large and small-throughout the country.

In many other instances, State and Federal conciliation services aided in adjusting controversies. For example, the Federal Mediation and Conciliation Service handled and helped to resolve 6,832 disputes in 1948. Of this number, 1,077 cases involved work stoppages and 5,755 were

[^1]controversies or threatened strikes which were settled before actual stoppages developed.

Direct idleness at sites of the plants or establishments involved in strikes amounted to less than 0.4 percent of total working time in American industry during 1948.

A total of 20 stoppages began in 1948 , in which 10,000 or more workers were involved. By contrast, a total of 15 such stoppages were recorded in 1947. Approximately 870,000 workers were directly affected in the 20 large stoppages and accounted for 44.5 percent of all workers involved in stoppages during 1948. Idleness resulting from the large stoppages aggregated $18,900,000$ mandays in 1948, as compared with about $17,700,000$ man-days in 1947.

## "National Emergency" Disputes ${ }^{3}$

One of the developments during the postwar period of industrial unrest was the appointment of "fact-finding" boards to investigate important disputes and suggest a basis of settlement. These boards-designated either by the President or the Secretary of Labor-had no statutory authority. With the enactment of the Labor Management Relations Act the President was authorized to appoint boards of inquiry in so-called national emergency disputes. Such boards, however, were limited to reporting the facts of the controversy, without recommendations for settlement. Appointment of these boards was, in a large sense ${ }_{3}$ a necessary preliminary step to obtaining a court injunction to forestall a stoppage or to order the return of striking workers.

[^2]
## Chart 2. Idleness Due to Work Stoppages

The "national emergency" machinery was invoked seven times in 1948. Work stoppages occurred in connection with four of these disputes. In the bituminous-coal pension dispute the board of inquiry was created about a week after the stoppage commenced and in the meat-packing wage controversy the strike began the day after the designation of the board. The West Coast maritime and longshore controversy and the East Coast dock dispute were investigated by separate boards of inquiry. In each of these two cases the report of the board was followed by a temporary injunction restraining the workers from striking and, after the expiration of the 80 -day waiting period, a strike ensued. Three other labormanagement disputes referred to boards of inquiry were settled without any interruption of work. These controversies included the atomic energy dispute at the Oak Ridge National Laboratory, the
telephone industry wage controversy, and the June dispute between the United Mine Workers and bituminous-coal operators over the negotiation of the new contract.

## Monthly Trends-Significant Stoppages

The occurrence of strikes during 1948 conformed more closely than that of 1947 to the month-bymonth trends noted in other recent years. In the early months, stoppages increased in number and continued upward until late summer, when they tapered off to the customary low point of the year in December.

The most important of the 85 stoppages which continued from 1947 into 1948 was the strike involving about 1,600 typographical workers on 6 Chicago newspapers, over union-security issues in establishments where the closed shop had been
accepted for years. This strike continued throughout 1948.

More than 300 stoppages began in each month from April through August. With the large bitu-minous-coal and meat-packing strikes in effect, March and April were the months with the greatest number of workers involved and the greatest time loss.

Table 3.-Work stoppages in 1947 and 1948, by month

| Month | Number of stoppages |  | Workers involved in stoppages |  |  | Man-days idle during month |  |

1 See footnotes 2 and 3, table 1.

During January, approximately 12,000 timber and sawmill workers, members of the United Construction Workers, affiliated with District 50, United Mine Workers of America (Ind.), stopped work for a wage increase, in the tri-State area of Maryland, Pennsylvania, and West Virginia. Work was resumed in late January, after the operators granted a substantial wage increase and adjusted their cost-price relationships with the coal-mining and steel companies, the purchasers of the timber products.

About 10,000 garment workers, members of the International Ladies' Garment Workers' Union (AFL), stopped work in Los Angeles in February,
in connection with a drive to organize all nonunion shops in the area. Most of the workers were idle only a few days, although picketing and individual stoppages continued over a considerable period before many of the shops were brought under signed contracts.

A demand for increased wages by 1,100 teachers in Minneapolis closed the city's public schools on February 24. This stoppage lasted for almost a month.

The two largest strikes of the year began in March when about 83,000 employees of major meat-packing companies, and 320,000 bituminous-

Chart 3. Monthly Trends in Work Stoppages

coal miners became idle. The meat-packing employees, members of the United Packinghouse Workers of America (CIO) left their work in about 100 plants on March 16, when employers refused to offer more than a 9 -cent hourly wage increasethe amount accepted previously by the Amalgamated Meat Cutters \& Butcher Workmen of North America (AFL).

Acting under the national-emergency provisions of the Labor Management Relations Act, the President appointed a 3-man board of inquiry on March 15 to investigate the issues and report its findings. The Board's report was submitted April 8, and the Federal Mediation and Conciliation Service continued in its attempts to bring about a settlement. No injunction was sought to get the workers to return to their jobs. The strike continued officially until May 21, when it was terminated at the Swift, Armour, Morrell, and Cudahy plants, following a vote of the employees to accept the employers' offer of a 9 -cent hourly wage increase. The settlement also provided for arbitration of disputes over reinstatement of strikers charged with unlawful acts during the stoppages. The fifth large packer-Wilson and Co.-was unable to reach agreement with the union on the latter provision, and the strike continued in its plants until June 5.

Most of the Nation's bituminous-coal miners stopped work on March 15, following a long dispute over the establishment of a pension system for miners in accordance with the 1947 contract. The welfare fund provided for in that contract was to be administered by a board of trustees composed of an industry representative, a union representative, and a third or neutral member. After several months of disagreement the neutral trustee resigned. The deadlock continued, and on March 12 the president of the United Mine Workers advised the miners that the bituminouscoal operators had "dishonored" their 1947 wage agreement and had "defaulted under its provisions affecting the welfare fund." The union further charged that "no payments of any character have been made to any beneficiary or to anyone else from the welfare fund set up under the 1947 agreement."

A board of inquiry was appointed March 23. Following its report, a temporary restraining order was issued on April 3 instructing the union to order the soft-coal miners back to work and direct-
ing the parties to resume collective bargaining on the pension plan. No immediate response to the order was forthcoming, and on April 7, the Government filed a request for contempt action against the union and its president, John L. Lewis.

Three days later (April 10), Joseph W. Martin, Speaker of the House of Representatives, proposed that Senator Styles Bridges of New Hampshire be considered for the post of neutral trustee. The union and the operators both accepted this suggestion. Two days later, Mr. Bridges proposed that the parties agree to grant pensions of $\$ 100$ per month to members of the union who, on and after May 29, 1946, had completed 20 years of service in the mines and had reached 62 years of age. This proposal was adopted, with the operators' representative dissenting.

On April 19, Mr. Lewis and the union were found guilty of civil and criminal contempt of court for having failed to instruct the miners to return to work. The union was fined $\$ 1,400,000$, and its president $\$ 20,000$, on the criminal contempt count. By April 26, most miners had returned to work; but Mr. Lewis and the union were still subject to civil penalties if further stoppages occurred.

Four stoppages, involving 10,000 or more workers each, occurred in April. Of these, the 5 -month strike of about 18,000 workers employed at the Seattle plant of the Boeing Airplane Co. attracted widespread attention. The company claimed that the strike was in violation of the Labor Management Relations Act, alleging that the local union, an affiliate of the International Association of Machinists (Ind.) had broken its no-strike clause and had failed to give the required 60 -day notice. The striking workers, according to the company, lost their status as employees and were not entitled to reinstatement. The National Labor Relations Board ruled, however, that negotiations had begun in March 1947, prior to the enactment of the law, and ordered the company to bargain with the union and reinstate the striking workers. ${ }^{4}$

Also in April, a strike of slightly more than 100 members of the United Retail, Wholesale and Department Store Union (CIO) in New York

[^3]City, against the Times Square Corp., gave rise to another significant NLRB decision. The Board ruled that in strike situations not caused by unfair labor practices, striking employees who have been replaced are not eligible to vote in collectivebargaining elections. ${ }^{5}$

The largest stoppage in May was that of 75,000 employees of the Chrysler Corp., which involved members of the United Automobile Workers (CIO) working in 16 plants in Indiana, Michigan, and California. The union originally demanded an hourly wage increase of 30 cents and fringe adjustments, but scaled its demands down to 17 cents an hour just prior to the stoppage, which began May 12. A company offer of 6 cents an hour was withdrawn after its rejection by the union. The strike was settled on May 28, the workers receiving a flat 13 -cent hourly wage increase under a contract effective until August 1950, with provision for a wage reopening by either party after June 15, 1949. Several days earlier, the General Motors Corp. and the UAWCIO had reached an agreement providing for an 11-cent increase with provision for quarterly adjustments in wages based upon changes in the Bureau of Labor Statistics consumers' price index.

Early in July, about 42,000 workers in " captive" coal mines were idle for a short period when representatives of the large steel companies, operating the mines, refused to accept the unionshop provision in the 1948 contract previously agreed upon with the commercial operators. The captive mine operators filed an unfair labor practice charge against the union with the NLRB contending that the provision violated the Labor Management Relations Act. The General Coun-

[^4]sel of the NLRB issued a formal complaint on July 9 against the union and sought to enjoin the strike in a Federal court in Washington. The union was given until July 13 to answer the charges. On that date an agreement was reached informally-the companies accepting the unionshop provision with the stipulation that it would be modified if subsequent court rulings required it. ${ }^{6}$ The miners were instructed to return to work the next day, and on July 17 the injunction petition was dismissed. This controversy evoked a sympathy stoppage of about 40,000 workers in commercial mines.

During the latter part of August some 23,000 members of the United Automobile Workers, employees of the International Harvester Co., were idle for about 2 weeks. In this dispute, the union accused the company of following speed-up and time-study methods which reduced take-home pay. Early in September, disputes brought idleness to 16,000 truck drivers in New York and Northern New Jersey, 28,000 members of 5 West Coast maritime and longshore unions, 17,000 employees of a group of oil companies in California, and 25,000 employees of the Briggs Manufacturing Co. in Detroit.

The West Coast maritime strike, involving 28,000 workers, began September 2 after expiration of an 80-day injunction obtained under the national emergency provisions of the Labor Management Relations Act. It continued until early December. Higher wages and the retention of the union hiring halls were the principal issues in dispute. Negotiations were suspended when the Waterfront Employers Association and the Pacific-American Shipowners' Association withdrew all previous offers, demanding that union leaders sign non-Communist affidavits before renewal of bargaining discussions. Shipping operations to and from West Coast ports were virtually halted, although United States Army authorities made arrangements to move military cargo to the Orient and Pacific outposts.

Negotiations were resumed on November 10, and 15 days later agreement was reached with the International Longshoremen's and Warehousemen's Union (CIO) providing for a 3-year con-

[^5]tract, with average hourly wage increases of 15 cents, additional vacation benefits, and retention of the union hiring halls pending a court decision on their legality. Earlier, a tentative agreement had been reached with the National Marine Engineers Beneficial Association (CIO), and the agreement reached by the longshoremen, paved the way for quick settlements with the 3 unions remaining on strike.

No large strikes began in October, but in November Atlantic Coast shipping was disrupted when about 45,000 members of the International Longshoremen's Association (AFL) stopped work in a dispute over increased wages and application of overtime rates of pay. The strike began as spasmodic stoppages on November 10, but became a union-authorized coast-wide strike 2 days later. Shipping from Portland, Maine, to Hampton Roads, Va., was affected.

As in the case of the Pacific Coast maritime stoppage, the East Coast longshoremen struck after the national emergency machinery of the Labor Management Relations Act had been used, and after the 80 -day injunction was dissolved as of midnight, November 9. Union and employer negotiators reached an agreement on November 9 ; but a majority of local unions voted against its acceptance, whereupon the union officially authorized the strike.

On November 25, settlement was reached with the aid of the Federal Mediation and Conciliation Service, providing for wage increases of 13 cents in straight-time rates and $19 \frac{1}{2}$ cents for night, holiday, and overtime rates, a welfare plan, and improved vacation benefits. Work was resumed on November 28 after ratification by union members.

## Industries Affected

The mining industry (primarily coal) was affected by work stoppages to a greater extent than any other industry during 1948. Approximately $10,400,000$ man-days of idleness occurred in that industry-more than 30 percent of the total mandays lost. Excepting the record years of 1943 and 1946, this was the largest figure for mining since 1927. The meat-packing strike accounted for the bulk of the approximately 5 million man-days of idleness in the food and kindred products group. Maritime strikes caused the transportation, com-
munication, and other public utilities groups to rank third in the amount of time lost, with over 3 million man-days. In fourth place was the transportation-equipment manufacturing group, which also had over 3 million man-days of idleness.

Table 4.-Work stoppages beginning in 1943, by industry group

${ }^{1}$ This figure is less than the sum of the figures below because two stoppages which extended into two or more industry groups have been counted in this table as separate stoppages in each industry group affected; workers involved and man-days idle were allocated to the respective groups.
${ }^{2}$ See footnotes 2 and 3 , table 1
${ }^{2}$ Not available.
${ }^{4}$ Stoppages involving municipally operated utilities are included under "transportation, communication, and other public utilities."

## States Affected

New York and Pennsylvania each experienced about 450 stoppages in 1948. Ohio ranked next with 256 stoppages, Illinois had 237, and West Virginia 211. Less than 10 stoppages were

## recorded in each of 9 States-Arizona, Delaware,

 Idaho, Mississippi, Nevada, North Dakota, South Dakota, Vermont, and Wyoming.Idleness exceeded 2 million man-days in 6 States-California, Illinois, Michigan, New York, Pennsylvania, and West Virginia.

${ }^{1}$ The sum of this column is more than 3,419 because the stoppages extending across State lines have been counted in this table as separate stoppages in each State affiected, with the proper allocation of workers involved and mandays idle.
${ }^{2}$ I Iess than a tenth of 1 percent

## Cities Affected

Except for New York City, with 295 stoppages, no city had as many as 100 strikes in the year There were 96 in Detroit, 66 in Chicago, 57 in Los Angeles, and 53 in Philadelphia. Over a million man-days of idleness during work stoppages were recorded for four cities: Detroit

The number of cities in which 10 or more stoppages occurred has dropped steadily from 104 in 1946 to 61 in 1947 and 45 in 1948.

## Major Issues Involved

Wage increases and fringe benefits continued to be important issues in 1948 disputes. About 51 percent of the strikes, 62 percent of the workers involved, and nearly 74 percent of the total idleness dealt principally with demands for higher pay. Included in this category was the largest strike of the year, the prolonged bituminous-coal stoppage over the activation of the miners' pension and welfare fund. In the later and smaller coal

[^7]strike of 42,000 "captive" coal miners, as well as in stoppages in the maritime and printing industries, the retention of well-established unionsecurity provisions was an important factor.

Roughly, about a fifth of the 1948 strike activity centered on questions of union recognition and union-security provisions. Prominent also in some of these disputes were wage issues. A number of stoppages-for instance, those at the National Carbon Co. in Cleveland, the Hoover Co. in North Canton, and the Univis Lens Co. in Dayton, Ohio, the Bucyrus Erie Co. in Evansville, Ind., and Government Services, Inc., in Washington, D. C.-centered on the alleged refusal of emplovers to recognize or negotiate with unions not certified as bargaining agents by the NLRB. In most cases these unions were ineligible for certification because of their refusal to file nonCommunist affidavits.

Jurisdictional, union rivalry, and sympathy strikes accounted for about 1 out of every 25 stoppages. These controversies affected less than 7 percent of the total workers involved and accounted for 3.2 percent of all idleness.

## Contract Status at Time of Stoppage

Slightly more than a third of the stoppages in 1948 occurred while union-management contracts were in effect. Many of these were over grievances which were not settled successfully. Others resulted from disputes over the renewal of the contract which was soon to expire. In still other cases the stoppages resulted from alleged attempts to change the terms of the contract while in force.

Approximately half of the year's stoppages occurred when no governing contract was in effect. Most of these disputes were over terms of new contracts to replace those recently expired. Many, of course, resulted from attempts to obtain union recognition or an initial contract.

In nearly 200 cases the union and company reported disagreement as to whether contracts actually were in effect when the stoppages occurred.

## Pre-stoppage Mediation

Sixty-nine percent of the stoppages in 1948 took place without the utilization of a mediation agency or neutral third party to help settle the disputes.

Many of these open breaks could undoubtedly have been avoided if the parties had called in experienced mediators from Federal, State, or local agencies. The experience of these agencies has been that a large majority of the disputes referred to them, before a strike or lock-out begins, can be settled without a work stoppage.

In 1,066 or 31 percent of the total stoppages, however, third-party mediators participated in negotiations before the stoppages began.

## Length of Disputes Before Stoppages

For 2,423 or over two-thirds of the stoppages beginning in 1948, some information was obtained to show how long the disputes had existed before an interruption of work occurred. In nearly a fourth of these cases companies and unions disagreed as to how long the disputes had been in effect. Among the cases in which there was agreement on the point, 14 percent of the stoppages were essentially spontaneous, arising from disputes at the moment or within a day while 27 percent resulted from disputes that had existed for 2 months or more. About 13 percent of the disputes reportedly had been in effect for 60 days before stoppages took place.

| Length of dispute before stoppage | Stoppages Number Percent |  | WorkersNumberinvolvedPercent |  |

| Total | 1,855 | 100.0 | 1, 273, 000 | 100.0 |

## Unions Involved

Unions affiliated with the AFL were involved in more stoppages than were CIO affiliates. However, both the CIO and unaffiliated-union groups each had a greater number of workers involved in stoppages than did the AFL; they also accounted for the bulk of the year's total idleness.

Table 8.-Work stoppages in 1948, by affiliation of unions involved

${ }^{1}$ Less than a tenth of 1 percent.

## Establishments Involved

About 73 percent of all stoppages in 1948 occurred in a single plant or establishment-approximately the same proportion as in 1947. The proportion of workers involved in single-establishment disputes ( 32.7 percent of the total) was a little greater than the 27.3 percent in 1947. Less than 10 percent of the stoppages extended into more than 10 establishments, but these stoppages

were responsible for 48 percent of the total workers involved and 60 percent of the idleness.

## Size of Stoppages

As in the preceding year, approximately half of the stoppages in 1948 involved fewer than 100 workers. At the other end of the scale were 20 stoppages which involved 5,000 to 10,000 workers each and another 20 which involved 10,000 or more workers each. The first group were short stoppages and accounted for only 2.9 percent of the total idleness. The 20 largest stoppages, on the other hand, accounted for 44 percent of the total workers involved in stoppages and 55 percent

Table 11.-Work stoppages beginning in 1948 in which 10,000 or more workers were involved

| Sept. 8 | 16 | Briggs Manufacturing Co., Detroit, Mich. | United Plant Guard Workers (Independent). | 25, 000 | A 2-year contract retaining a disputed 5 -minute preparatory time arrangement and providing a main tenance of membership clause. |
| Nov. 9---- | 4 | Ohrysler Corp., Detroit, Mich. | United Automobile Workers (CIO). | 13,000 | Dispute over production standards to be handled through grievance procedure. |
| Nov. 10. | 18 | Shipping Coast. | $\begin{aligned} & \text { International Longshoremen's } \\ & \text { Association (AFL). } \end{aligned}$ | 45,000 | Wage increase of 13 cents in straight-time rates, 1918 cents in overtime rates, a welfare plan and improved vacation beneflts. |

${ }^{1}$ By late January approximately 8,000 workers had returned; others returned about 2 weeks later.
${ }^{2}$ Most workers idle 2 days; 3,000 workers for 5 days; 500 idle for approximately 2 months.
${ }_{3}$ Settlements reached with Swift, Armour, and Cudahy plants on May 21.
Stoppage continued at Wilson plants until June 5.
4 Some workers out only 2 or 3 days.
${ }^{3}$ Total length of stoppage; some workers returned to their jobs during strike and company also hired replacements.
${ }^{6}$ Approximately 2,000 workers at Auburn, N. Y., went out on June 15 and remained out until June 30 .
a Approximately 10,000 New York truck drivers and helpers idled Sept. 1 , with the New Jersey workers going out on Sept. 7. On Sept. 18, individual With the New Jersey workers going out on sept. 7 . On sept.
companies began to sign separate agreements with the anion. ${ }^{\text {F }}$ First settlements with individual companies were reached about Nov. 4; ${ }^{\text {b }}$ First settlements with individual companies were reached about Nov. 4; pany still on strike at the end of December.
of the idleness. The 20 stoppages involving 10,000 or more workers are listed separately in table 11.

## Duration of Stoppages

About a fourth of the stoppages ending in 1948 lasted from 1 to 3 days, approximately half of them lasted from 4 days to 1 month and the remaining quarter lasted for 1 month or longer. Over three-fourths of the total time lost during strikes in 1948 was in connection with stoppages which lasted for a month or more. (See table 12.) On the average, stoppages lasted 21.8 calendar days

Table 12.-Duration of work stoppages ending in 1948

| Duration | Stoppages |  | Workers involved |  | Man-days idle |  |

| 2 months and less than 3 months. | 165 | 4. 9 | 127,000 | 6. 5 | 5, 930, 000 | 17.8 |
| 3 months and over---------- | 144 | 4.2 | 87, 700 | 4.5 | 6, 650, 000 | 20.0 |

in 1948. This compares with 25.6 calendar days in 1947, and 24.2 in 1946. During the war years (1942-45) the average was 7.8 calendar days; in the prewar period of 1935-39 it was 22.5 .

## Methods of Terminating Stoppages

Approximately 44 percent of the stoppages in 1948 were terminated by agreement between the employers and unions (or workers) involved without the help of any outside agency. This represents a slight increase over 1947 when about 40 percent of all stoppages were settled directly.

About one-fifth of all stoppages were terminated without formal settlement as contrasted with 14 percent in 1947 and about 12 percent in 1946. This group includes "lost" strikes in which workers returned to their jobs without settlement or sought other employment because their cause appeared hopeless. About 13 percent of all workers involved were in this group.

Government mediation and conciliation agencies (local, State, and/or Federal) assisted in terminating approximately 31 percent of all stoppages as compared with almost 43 percent in 1947 and 53 percent in 1946. During the war years (194245) considerably more than half of the stoppages were terminated with the assistance of Government agencies.

## Disposition of Issues

In almost 72 percent of the stoppages ending in 1948 the major issues were settled or disposed of at the termination of the stoppage. This group involved the largest percentage of workers (74.4) and man-days lost (85.2).

In 16 percent of the stoppages the parties agreed to resume work and then settle the issues directly
by further negotiations. Nearly 4 percent of the disputes went to arbitration after wọk was resumed. Government agencies were to assist with negotiations in 2 percent and many other disputes were referred to the National Labor Relations Board for action.

## Appendix A

Tables A and B which follow present data for work stoppages in specific industries and within each industry group by major issues involved.
In each of 26 States there were 25 or more stoppages in 1948. In table $C$ the stoppages in each of these States are classified according to manufac-
turing and nonmanufacturing industry groups.
The principal developments in connection with the boards of inquiry are shown in chronological order on page 23. These boards were appointed in 1948 under the national emergency provisions of the Labor Management Relations Act.

Table A.-Work stoppages in 1948, by specific industry

[^9]${ }_{2}$ The sum of this column is more than 119 because a few stoppages which
extended into 2 or more industry groups have been counted in this table as separate stoppages in each industry group affected; workers involved and man-days idle were allocated to the respective groups.

## Appendix B

## Vork of Emergency

oards of Inquiry in 1948
Boards of Inquiry established by the President nder the national emergency provisions of the ،abor-Management Relations (Taft-Hartley) Act 1947, investigated seven disputes in 1948. n each instance, operations are traced chronogically in the following record from the date hat the President named the members of the oard through final settlement of the individual ispute. These summaries afford an opportunity o review the interplay of the work done by the oards of inquiry, by labor and management, and y public agencies in settling the major grievances hich threatened national health or safety.
tomic Energy Dispute: Atomic Trades and Labor Council (AFL), and Carbide and Carbon Chemicals Corp.

Tarch 5: Board of inquiry appointed by the President to investigate and report on the labor dispute at Oak Ridge National Laboratory over wage adjustments and retention of sick-leave benefits. Members-John Lord O'Brian, New York and Washington attorney, chairman; C. Canby Balderston, dean of Wharton School of Finance and Commerce, University of Pennsylvania; and Stanley F. Teele, assistant dean of Harvard Graduate School of Business Administration.
Larch 15: Board's first report submitted to the President; it found that the issues in dispute remained unsettled and the threat of strike unaltered.
Iarch 19: Department of Justice requested and obtained injunction from the United States District Court of East Tennessee.
Larch 24: Board of inquiry reconvened by the President. Iar 18: Board's second report submitted to the President, containing a statement of employer's last offer and stating that positions of the parties remained unaltered and dispute unsettled.
jne 1-2: National Labor Relations Board conducted a secret ballot to ascertain whether workers wished to accept final offer of the employer. By a vote of 771 to 26 the employer's last offer was rejected.
JNE 11: Injunction dissolved by court upon motion of Attorney General.
one 15: Agreement by parties reached on the terms of a new contract, which granted workers hourly wage increases from $61 / 2$ to $401 / 2$ cents retroactive to December 18, 1947, and sick-leave benefits, varying in amounts according to years of service.

June 18: The President reported to Congress on the dispute and recommended that special study be given to the problem of peaceful and orderly settlement of labor disputes in Government-owned, privately operated atomic energy installations. He proposed establishment of a commission to study possible need of special legislation to avert labor shut-downs in atomic energy plants. Members were to be appointed with the advice of the Atomic Energy Commission and the Joint Committee on Atomic Energy.

Meat-Packing Dispute: United Packinghouse Workers of America (CIO), and Five Major Meat-Packing Firms.
March 15: Board of inquiry appointed by the President to investigate the dispute in the meat-packing industry over the union's demand for increased wages. Mem-bers-Nathan P. Feinsinger, professor of law, University of Wisconsin, chairman; Pearce Davis, Department of Business and Economics, Illinois Institute of Technology; and Walter V. Schaefer, professor of law, Northwestern University Law School.
March 16: Strike began in plants of the five companies in 20 States. Approximately 83,000 workers involved.
April 8: Report of board submitted to the President setting forth and analyzing the position of the parties.
May 21: Strike terminated at plants of four of the larger companies following the union's acceptance of a 9 -cent hourly wage increase.
June 5: Strike was ended at Wilson \& Co. under approximately the same terms.

Bituminous-Coal Miners' Pension Dispute: United Mine Workers of America (Ind.), and Bituminous-Coal Mine Operators.

Marct 15: Work stoppage began. Within a few days approximately 320,000 workers were involved.
March 23: Board of inquiry appointed by the President. Members-Federal Judge Sherman Minton, chairman; George W. Taylor, Wharton School of Finance and Commerce, University of Pennsylvania; Mark Ethridge, publisher of the Louisville Courier-Journal. Principal issue was the union's charge that employers had failed to set up a pension plan, as provided for in the contract of July 1947.
March 31: Board report submitted to the President, finding that action of union president by communications to UMWA officers and members induced miners to stop work in a concerted fashion and that stoppage was not independent action by miners acting individually and separately.
April 3: A 10 -day restraining order issued by United States District Court for District of Columbia.

April 10: The Speaker of the House of Representatives suggested Senator Styles Bridges of New Hampshire as the neutral member of the board of trustees. This was acceptable to the union and industry representatives of the board of trustees.
April 12: Senator Bridges proposed a plan whereby pensions of $\$ 100$ a month were to be paid to members of the UMWA, who, on and after May 29, 1946, had completed 20 years' service in the mines and had reached 62 years of age. This plan was accepted and declared adopted, the operators' trustee dissenting.
April 19: The court found the UMWA president and the union guilty of both criminal and civil contempt of court, resulting in fines, on the criminal charges, of $\$ 20,000$ against John L. Lewis, president, and $\$ 1,400,000$ against the union.
April 21: An 80-day injunction issued by the court, forbidding continuance or resumption of a Nation-wide coal strike.
April 24-26: Most miners returned to work.
June 23: The court dissolved the injunction which had been in effect since April 21.

Telephone Dispute: American Union of Telephone Workers (CIO), and American Telephone \& Telegraph Co. (Long Lines Division).

May 18: Board of inquiry appointed by the President. Members-Sumner H. Schlichter of Harvard University, chairman; Charles A. Horsky, attorney of Washington, D. C.; and Aaron Horwitz, industrial relations expert of New York City. The Board to report by June 8. Principal issues: Demands for increased wages and changes in working rules.
May 25: Formal hearings scheduled to begin were postponed until June 8.
June 4: The company and union signed a 21 -month agreement, which did not provide for general wage increase but provided for improvements in working conditions and for reopening of wage question at any time.

Maritime Industry Dispute-Atlantic, Pacific, and Gulf Coasts, and Great Lakes: Maritime Unions, ${ }^{7}$ and Shipping Companies.

June 3: Board of inquiry appointed by the President. Members-Harry Shulman of Yale University Law School, chairman; Andrew Jackson, attorney, New York City; Arthur P. Allen, University of California, Institute of Industrial Relations; Jesse Freidin, attorney, New York City; George Cheney, San Diego labor relations consultant. Principal issues were higher wages

[^10]and retention of union hiring halls. ${ }^{8}$ Board hearings held concurrently in New York and San Francisco.
June 11: Board report submitted to the President.
June 14: Temporary restraining orders issued by Federal District courts in New York, San Francisco, and Cleveland.
June 22: Federal District courts in San Francisco and Cleveland issued second 10-day restraining orders.
June 23: The Federal District Court in New York issued an 80-day injunction barring strikes of maritime workers on Atlantic and Gulf coasts.
June 30: The court in Cleveland issued an 80-day injunction covering Great Lakes area.
July 2: The court in San Francisco issued an 80-day injunction covering Pacific Coast area.
August 10: Board reconvened, with some members sitting in San Francisco.
August 11: Board reconvened, with some members sitting in New York.
August 14: Board's final report submitted to President, including statement of employers' last offer of settlement.
August 18: National Maritime Union reached an agreement with Atlantic and Gulf Coast shipping operators providing for wage increases and retention of union hiring halls pending court rulings on their legality.
August 25: National Marine Engineers' Beneficial Association reached an agreement with Atlantic and Gulf Coast operators providing for wage increases; union hiring halls to be continued until their legal status determined by court action.
August 27: American Radio Association signed new contract providing for wage increases, and renewal of hiring hall provisions of old contract pending court rulings on their legality.
August 30-31: National Labor Relations Board conducted secret ballot of West Coast employees on question of accepting employers' last offer. International Longshoremen's and Warehousemen's Union boycotted balloting and did not appear to vote; other West Coast unions received ballots by mail.
September 1: The 80-day injunction covering Atlantic and Gulf Coasts dissolved by court action.
Sephember 2: The 80-day injunction covering West Coast dissolved.
September 2: National Maritime Union reached an agreement with Great Lakes operators, retaining hiring hall clauses pending final court decision on the issue.
September 3: Stoppage began at Pacific Coast ports over wage and hiring hall issues. Approximately 28,000 longshoremen and ship-crew members directly involved.
November 25: Settlement between employers and ILWU (CIO), providing for hourly wage increases of 15 cents, not retroactive, and retention of union hiring halls pending court rulings on their legality. Other striking unions secured settlements within the next few days.

[^11]Bituminous-Coal Miners' Contract Dispute: United Mine Workers of America (Ind.), and Bituminous-Coal Mine Operators
June 19: Board of inquiry appointed by the President to report on coal contract dispute over wages and other conditions of employment. Members-David L. Cole, attorney, of Paterson, N. J., chairman; E. Wight Bakke, Yale University; Waldo E. Fisher, University of Pennsylvania.
June 24: Agreement covering commercial mines reached on a 1-year contract, which provided for a wage increase of $\$ 1$ per day and for doubling the operators' payment into the welfare and retirement fund to 20 cents per ton of coal mined.
June 26: Board reported to the President that threat of a coal strike affecting the public interest had been averted. ${ }^{9}$

Dock Workers' Dispute on the Atlantic Coast: International Longshoremen's Association (AFL), and shipping companies.
Adgust 17: Board of inquiry appointed by the President. Members-Saul Wallen, labor attorney, Boston, Mass., chairman; Joseph L. Miller, labor consultant, Washington, D. C.; Julius Kass, attorney, New York City. Principal issues: Wage increases and application of overtime rates.
Adgust 20: Board's report submitted to the President stating that dispute over overtime payments had blocked negotiations and that agreement on other terms might be reached quickly if overtime question could be resolved.

[^12]August 21: The Federal District Court in New York issued 10-day restraining order prohibiting strikes and lock-outs by longshoremen and employers at Atlantic Coast ports.
Adgust 24: An 80-day injunction issued by the court. The effect of this was to prohibit strikes or lock-outs until November 9.
August 26: Board reconvened by the President.
October 21: Board's final report submitted to the President, including a statement of employers' last offer of settlement.
November 4-5: National Labor Relations Board conducted poll of union members on question of accepting employers' last offer. Employees rejected terms by large majority.
November 9: Agreement concluded between union officers and shipping representatives, providing for hourly wage increases of 10 cents in straight-time rates and 15 cents in overtime rates.
November 9: Anti-strike injunction dissolved by court action.

November 10: Sporadic stoppages developed along Atlantic Coast as longshoremen voted to reject agreement.
November 12: Majority of union locals rejected tentative agreement and an official strike sanctioned by union. Approximately 45,000 dock workers, from Maine to Virginia, involved.

November 25: Agreement reached providing for a 13 -cent hourly increase in straight-time rates, 191/2-cent increase in overtime rates, a welfare plan, and improved vacation benefits. Agreement ratified by membership, and dock workers returned to work on November 28.

## Appendix C

## Methods of Collecting Strike Statistics

Coverage.-The Bureau's statistics on work stoppages include all known strikes and lock-outs in the continental United States involving as many as six workers and lasting a full shift or longer. Stoppages which affect fewer than six workers, or last less than a full workday or shift are not included because it is virtually impossible to secure an adequate coverage of these minor disputes.

Definitions.-For statistical purposes the following definitions are used:

> A strike is a temporary stoppage of work by a group of employees to express a grievance or to enforce a demand. A lock-out is a temporary withholding of work from a group of employees by an employer (or a group of employers) in order to coerce them into accepting the employer's terms.

These definitions point out certain characteristics inherent in each strike or lock-out: (1) The stoppage is temporary rather than permanent; (2) the action is by or against a group rather than an individual; (3) an employer-employee relationship exists; and (4) the objective is to express a grievance or enforce a demand.

At times, the grievance may or may not be against the employer of the striking group. In jurisdictional, as well as rival union or representation strikes, the major elements of dispute may be between two unions rather than directly with the employer. In a sympathy strike there is usually no dispute between the striking workers and their immediate employer but the purpose is to give union support or broaden group pressure for the benefit of some other graup of workers. Sym-
pathy or protest strikes may also be intended to record the workers' feelings against actions (or absence of action) by local, State, or Federal Government agencies on matters of general worker concern.

Quantitative measures.-Statistically, work stoppages are measured in terms of the number of stoppages, the number of workers involved, and the number of man-days of idleness. Figures on "workers involved" and "man-days idle" cover all workers made idle in establishments directly involved in a stoppage. They do not measure the indirect or secondary effects on other establishments or industries whose employees may be made idle as a result of material or service shortages.

Collection of data.-Notices of the existence of work stoppages are obtained from various sources. Press clippings on labor disputes are received from daily and weekly newspapers throughout the country. Notices are also received directly from the Federal Mediation and Conciliation Service, as well as from agencies concerned with labormanagement disputes in over 30 States. Various employer associations, corporations, and unions which collect data for their own use also furnish the Bureau with work stoppage information.

Upon receipt of a work stoppage notice a questionnaire is sent to each party involved to secure first-hand information from the employer and the union as to the number of workers involved, duration, major issues, method of settlement, etc. In some instances, field agents of the Bureau secure the necessary data by personal visit.

[^0]:    1 All known work stoppages arising out of labor-management disputes, involving six or more workers, and continuing as long as a full day or shift, are included in reports of the Bureau of Labor Statistics. Figures on "workers involved" and "man-days idle" cover all workers made idle for as long as one shift in establishments directly involved in a stoppage. They do not measure the indirect or secondary effects on other establishments or industries whose employees are made idle as a result of material or service shortages.

[^1]:    2 See Appendix B, p. 23 . for detailed statement on the "national emergency disputes'of 1948.

[^2]:    See Appendix B, p. 23, for details on boards of inquiry appointed chronology of developments.

[^3]:    ${ }^{4}$ On May 31, 1949, the U. S. Court of Appeals at Washington, D. C., upheld the company's position that the strike was illegal since the union failed to give the required notice of contract termination and consequently lost its status as bargaining agent.

[^4]:    s The occasion for the ruling arose out of an NLRB election conducted on July 2, in which the employees voted whether or not they wished to be represented by the Retail Clerks International Association (AFL). Local 830, United Retail, Wholesale and Department Store Union (CIO), which had represented the employees in the past, was ineligible to appear on the ballot because it had not complied with the registration and non-Communist affdavit requirements of the law.
    At the election, the employer and the AFL challenged the voting eligibility of the 109 strikers on the ground that they were not entitled to reinstatement because they were economic strikers who had been permanently replaced. Board agents challenged 121 ballots cast by replacements pursuant to the CIO union's notice that the strike was caused by unfair labor practices of the employer, that the strikers consequently were entitled to reinstatement, and that their replacements, therefore, were temporary.
    The two sets of challenges, the Board pointed out, brought into issue the nature of the strike. If the strike was caused by unfair labor practices, then the strikers would be entitled to vote. In considering the charge of unfair labor practices, the Board stated that it was bound by the determination of the office of the General Counsel and could not review his dismissal of charges that the employer had committed unfair labor practices.

[^5]:    - On January 20, 1949, a NLRB trial examiner ruled that the union-shop provision of the contract between the United Mine Workers and the "captive" mine operators was in violation of the Labor Management Relations Act since no union-shop election had been held as required by the act.

[^6]:    ${ }^{1}$ Data are compiled separately for 150 cities, including all those with a population of 100,000 and over in 194 J as well as a number of smaller cities in order to obtain a representative regional distribution. This table includes data for the cities in this group which had 10 or more stoppages in 1948. ${ }^{2}$ Intercity stoppages, except those noted below, are counted in this table as separate stoppages in each city affected, with the workers involved and man-days idle allocated to the respective cities. In a few instances it was impossible to secure the detailed data necessary to make such allocations. Therefore, the following stoppages are not included in the figures for any cities affected: (1) A strike of sardine fishermen in the Los Angeles-Long Beach harbor area, involving 4,000 workers in October; and (2) scattered brief stoppages in plants of the Western Electric Co. during July, August, and September, in which approximately 2,000 employees were involved.

[^7]:    ${ }^{1}$ This category includes the bituminous-coal pension dispute involving 320,000 workers.
    2 Less than a tenth of 1 percent.

[^8]:    ${ }^{1}$ Included in this group are the cases which were referred to the National or State labor relations boards or other agencies for decisions or elections.

[^9]:    1 Idleness in 1948 resulting from stoppages which began in the preceding year.

[^10]:    ${ }^{7}$ International Longshoremen's and Warehousemen's Union (CIO), National Maritime Union (CIO), National Union of Marine Cooks and Stewards (CIO), National Marine Engineer's Beneficial Association (CIO), Pacific Coast Marine Firemen, Ollers, Watertenders and Wipers' Association (Ind.), and American Radio Association (CIO). The International Brotherhood of Electrical Workers (AFL) through one of its locals, representing marine radio operators, was also involved.

[^11]:    8 The basic dispute-the question of retaining hiring halls-arose from the amendment of National Labor Relations Act by Labor Management Relations (Taft-Hartley) Act of 1847.

[^12]:    9 The agreement negotiated with the commercial bituminous-coal mine operators was not accepted by operators of "captive" mines. The unionshop clause was the issue in dispute. About 42,000 employees of "captive" mines were on strike for about 9 days in July. Operators then accepted the union-shop clause with proviso that it would be modified if court rulings required.
