Bulletin 1996

Preface

This bulletin, continuing an annual feature of the Bureau of Labor Statistics in the field of industrial relations since 1941, provides a detailed statistical presentation of work stoppages in 1976. The data presented in earlier bulletins have been supplemented by the addition of a historical record by industry group, 1937-76 (appendix A).

Preliminary monthly estimates of the level of strike (or lockout) activity for the United States as a whole are issued about 30 days after the end of the month of reference and are available on request. Preliminary estimates for the entire year are available at year's end; selected final tabulations are issued in the early summer of the following year. The methods used to prepare work stoppage statistics are described in appendix B.

The Bureau wishes to acknowledge the cooperation of employers and employer associations, labor unions, the Federal Mediation and Conciliation Service, and various State agencies which furnish information for this program.

The bulletin was prepared in the Division of Industrial Relations, Office of Wages and Industrial Relations, by Linda H. LeGrande.

Material in this publication is in the public domain and may be reproduced without the permission of the Federal Government. Please credit the Bureau of Labor Statistics and cite *Analysis of Work Stoppages, 1976*, Bulletin 1996.

Analysis of Work Stoppages, 1976

In 1976, unions had a greatly increased opportunity to negotiate contracts more beneficial to the workers they represented than was the case from 1971 to 1975. The economic climate improved considerably over the earlier years and there were many more contract expirations and reopenings.

From 1971 to 1974, negotiated provisions of collective bargaining agreements had to comply with the wage-price guidelines then in effect. After controls were removed in April 1974, a catchup policy by union negotiators became evident but this lasted only briefly.

The very slow economic improvement in 1975, coupled with a light bargaining calendar, helped to keep the number of stoppages at a fairly low level for that year. However, with the more than 900 contract renegotiations and wage reopenings and the improved economic picture in 1976, American labor and management reported the fourth highest level of work stoppages ever—some 5,648 stoppages began during the year, or 12 percent above the previous year.

In the private nonagricultural sector, major contracts (covering 1,000 workers or more) that expired or reopened in 1976 covered 4.4 million workers as compared with 2.5 million in 1975. Along with this increase in collective bargaining activity, the number of workers who participated in labor-management disputes increased to 2.4 million, a 39-percent rise between 1975 and 1976. Workers participating in stoppages in 1976 made up 3.0 percent of the total work force, almost 1 percentage point higher than in 1975. Some 37.9 million days of idleness were recorded in 1976, 6.7 million days more than in 1975. The percent of total working time accounted for by labor-management disputes in 1976 was 0.19 percent (1.9 working days idle per thousand), up from 0.16 percent in the previous year.

Strike duration

As in past years, a large proportion of work stoppages were of short duration (table 1). One-half of the 5,654 labor disputes that ended in 1976 lasted 11 days or less and almost one-fifth were in effect for 1 day (table 3). This concentration of short walkouts was largely accounted for by the 1,383 mining strikes that were in effect less than 2 weeks (table 25).

Shorter disputes occurred more often in the nonmanufacturing sector than in the manufacturing sector. Almost

three-fourths of all stoppages that were in effect 2 weeks or less took place in nonmanufacturing industries, and almost one-third of these disputes continued for only 1 day. Walkouts in manufacturing were longer, on the average, accounting for 60 percent of all stoppages in effect for 1 month or more.

Stoppages over noneconomic issues were of shorter duration than those over economic matters, as has historically been the case (table 26). Noneconomic issues¹ accounted for 87 percent of the stoppages and 77 percent of the workers involved in 1-day strikes. Seventy-eight percent of longer walkouts, those in the 15- to 29-day range, were over economic issues and involved an equal proportion of workers.

The occurrence of shorter stoppages in nonmanufacturing was attributable to the preponderance of noneconomically motivated disputes in mining (table 12). Of the 2,544 stoppages over noneconomic issues, almost 80 percent were in nonmanufacturing industries, more than 52 percent in mining alone. More than three-fourths of the disputes over plant administration and over two-thirds of the strikes concerned with "other working conditions" took place in the mining industry, primarily bituminous coal.

Size of strikes

Approximately 75 percent of all stoppages in 1976 involved fewer than 250 workers, as in 1974 and 1975 (table 8). But there were 23 major work stoppages (those involving 10,000 workers or more) in 1976, 3 more than in 1975 (table 4). The number of workers who participated in major walkouts in 1976, 1.0 million, was more than double the 1975 figure and almost triple the 1972 figure, when wage-price controls were in effect. The proportions of workers involved in major disputes in 1976 and the resulting days of idleness were the highest since 1971.

Noneconomic issues were the most frequent cause of stoppages involving 250-999 workers (table 13). About two-fifths of these stoppages were in the mining industry where 9 out of 10 walkouts were over noneconomic issues (tables 6 and 12).

¹ Noneconomic issues are union organization and security, job security, plant administration, other working conditions, interunion and intraunion affairs, and other contractual matters.

Major issues

As in the past, economic issues were the primary cause of most work stoppages in 1976 (table 11). However, relatively fewer disputes and days of idleness occurred over economic issues than in 1975.

Of the 23 major work stoppages in 1976, 12 resulted from disagreements over economic issues (text table 1). Nine of the major strikes over economic issues were in nonmanufacturing industries, although economic issues were not the cause of most stoppages in this sector. Over half of the workers who participated in major stoppages where economic demands were the chief issue were employed in the transportation and communication industry.

Job security was the most common noneconomic cause of major stoppages. However, it should be noted that in 7 of 8 strikes over job security, wage-related demands were also involved. The proportion of all disputes in which job security and economic matters were the issues (44 percent) was the same as for major strikes alone (text table 2 and table 11).

One major work stoppage in the transportation equipment industry accounted for more than one-half of the workers involved in strikes over union organization and security. A second major stoppage in this industry accounted for two-fifths of all workers who struck over the issue of job security.

Monthly pattern

May, June, and July are usually the peak months of work stoppage activity. However, in 1976, April was also a very active month. This may be explained by the timing of contract renegotiations and reopenings. In April, May, and June more agreements expired or were reopened than in other months in 1976;² the largest number of work stoppages began during these 3 months.

Contracts that covered workers in trucking (450,000), rubber (98,000), and construction (136,000) were up for renewal in April. Of the 465,000 workers who struck beginning in April—the peak month for strikers—more than two-thirds were employed in these three industries.

Contract status

Work stoppages that resulted from efforts of a union to negotiate a first agreement or to obtain recognition continued to decline. Such disputes accounted for 9.6 percent of all stoppages in 1974, 8.4 percent in 1975, and 7.9 percent in 1976 (table 10).

² Lena Bolton, "Auto, trucking lead increased 1976 bargaining activity," *Monthly Labor Review*, December 1977.

As in the past, stoppages that occurred while attempting to renegotiate an agreement in 1976 accounted for over one-half of all labor-management disputes.

Most of the strikes that took place while a contract was in effect were due to disagreements over plant administration, primarily in the mining industry. Somewhat over 70 percent of the 1,950 mid-contract stoppages occurred in the mining industry and 77 percent of all stoppages over day-to-day administration of the contract were in mining (tables 9 and 12).

Stoppages in wholesale and retail trade, services, government, and the transportation and communication industry constituted one-half of the labor disputes that occurred when unions were negotiating an initial contract or seeking recognition (table 9). Seven out of 10 stoppages that took place while a collective bargaining agreement was in effect occurred in the mining industry. Since these industries compose most of the nonmanufacturing sector, relatively more stoppages occurred in nonmanufacturing in connection with a first agreement or union recognition and when a contract was in effect (87 percent).

Union affiliation

Unaffiliated unions greatly increased their work stoppage activity in 1976 compared with AFL-CIO unions (table 7). The number of strikes by unaffiliated unions rose by more than 5 percentage points, workers involved by almost 23 percentage points, and days of idleness by about 18 percentage points.

The increase in work stoppage activity by unaffiliated unions arose largely from strikes involving 10,000 workers or more (table 5). There were three labor disputes by unaffiliated unions in 1975 (15 percent of all major strikes) while in 1976 there were 10 (43 percent).³ Eighteen percent of all workers involved in major stoppages during 1975 were represented by unaffiliated unions, in contrast with 70 percent during 1976. Only 11 percent of days idle in 1975 were attributable to major strikes by unaffiliated unions. In 1976, 54 percent of days idle were due to the major strike activity of unaffiliated unions. Most of the increase between 1975 and 1976 was attributable to large stoppages in the transportation and communication industry, the motor vehicle and equipment industry, and the farm machinery and equipment industry.

Fewer single-employer unions struck in 1976 than in any year since 1965. However, the annual average number of strikes called by these unions during the 1970's was greater than during the 1960's; their proportion of all stoppages was unchanged (text table 2). The number of workers involved in these strikes decreased both absolutely and relatively between the two time periods. In contrast, the

³ Four additional major work stoppages involved both unaffiliated and affiliated union members: 2 in 1975 and 2 in 1976. Workers and days idle are not available by union affiliation in stoppages by both affiliated and unaffiliated union members.

annual average of days idle during the 1970's rose by more than one-half from the prior decade.

Industry

Manufacturing. The trends in work stoppage activity for the manufacturing and nonmanufacturing sectors are illustrated in appendix A and charts 1, 2, and 3. Not since 1970 have the number of days idle and idleness as a percent of total working time in manufacturing been as high as in 1976—24.3 million and 0.51 percent, respectively. This was largely due to the work stoppage activity in three industries—rubber, food, and chemical.

The total of 6.1 million days idle in the rubber industry during 1976 was the highest for the industry since 1937 when data first became available. This was also true for

idleness as a proportion of worktime—3.93 percent (39.3 working days idle per thousand). These record levels reflected the 5-month strike in the industry in 1976.

In the food industry, the number of days idle (1.8 million) and idleness relative to estimated working time (0.43 percent) in 1976 were among the highest years on record for this industry. Days of idleness in 1976 were surpassed only in 1946 and 1948. A month-long stoppage that involved 29,000 workers accounted for 14 percent of days idle in the food industry in 1976. The ratio of days idle to total worktime exceeded the 1976 level in only 3 years.

The chemical industry experienced 1.1 million days of strike-related idleness and 0.43 percent of working time due to stoppages. In just 5 other years did days idle exceed 1 million—once in the 1940's and twice during both the 1960's and 1970's. Including 1976, there were 8 years in

Chart 2. Number of workers involved in stoppages beginning in the year by sector, 1950-76

Workers
in thousands

which idleness as a percent of working time in the chemical industry was equal to or greater than 4.3 working days idle per thousand.

Nonmanufacturing. The number of nonmanufacturing stoppages was the highest since 1936. More recently, the heightened work stoppage activity in the nonmanufacturing sector has been attributed to events in three industries: Mining, contract construction, and government. In 1976, the three industries combined accounted for 41 percent of the stoppages, 36 percent of the workers, and 19 percent of the days idle in the total economy (table 14). Work stoppage activity in the three industries, however, has not followed a single pattern.

The numbers of workers and days idle have differed significantly among the three industries (text table 3). In mining, after having peaked in the 1940's, strikers and days idle declined steadily, on the average, until 1970-76. Days idle in the construction industry, in contrast, rose in each period; the 1970's experienced the highest worker average. Government workers who struck and days of idleness per year, on the average, have grown at a rapid rate, except for a slight decline between the two earliest periods.

These different patterns explain the variations in average size and average length of labor-management disputes in the three industries from 1940 to 1976. In the 1940's, mining strikes averaged 1,313 workers per stoppage and declined by 2½ times between 1970 and 1976. Reflecting the frequent mid-contract walkouts in mining, the most recent 7-year period averaged only 6 days per strike. Construction walkouts have tended to lengthen during these 37 years, averaging 18.9 days between 1970 and 1976. While the average length of stoppages in government rose gradually to 7.9 days between 1942 and 1976, the average size of these disputes grew nearly fourfold to 541 workers per stoppage.

Occupation of workers

As in past years, there were relatively more stoppages (85 percent) involving production and maintenance

workers than any other occupational group (table 15). All measures of work stoppage activity related to these workers rose between 1975 and 1976.

The greatest decrease in the number of strikes called by a single occupational group was among service workers. The number of stoppages involving service workers declined about 30 percent and related days of idleness declined by 40 percent. The number of service workers who struck, however, rose by 28 percent between 1975 and 1976.

Walkouts involving professional and technical workers fell by 27 percent. The entire decrease occurred in government, with 147 stoppages in 1976 as opposed to 233 stoppages in 1975. There was also a 65-percent decrease in the number of government workers who struck and a 48-percent reduction in days of idleness.

The decline in work stoppages among government professional and technical workers was due to decreased strike activity among teachers (table 19). Between 1975 and 1976, the number of teacher disputes declined by almost 40 percent, teachers on strike by 65 percent, and days idle by 50 percent.

Location

Region^a and State. Six out of 10 stoppages in the United States took place in Regions III and V (table 21). The three States that experienced the most stoppages in 1976—Pennsylvania, West Virginia, and Ohio—are located in these regions. Of the nearly 2,000 stoppages in the three States,

^aRegion I: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont. Region II: New Jersey, New York. Region III: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia. Region IV: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee. Region V: Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin. Region VI: Arkansas, Louisiana, New Mexico, Oklahoma, Texas. Region VII: Iowa, Kansas, Missouri, Nebraska. Region VIII: Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming. Region IX: Arizona, California, Hawaii, Nevada. Region X: Alaska, Idaho, Oregon, Washington.

Text table 3. Work stoppages in mining, construction, and government, 1940-76

(Workers and days idle in thousands)

1960-69	221	97	1,124	897	308	5,187	119	70	539
1970-76	989	367	2,185	703	429	8,123	392	212	1,684

¹Government data begins in 1942. In 1940 and 1941, government stoppages were included in "other nonmanufacturing industries."

almost one-half occurred in mining and 9 out of 10 involved production and maintenance workers (tables 22 and 23).

In addition, Regions III and V led the other areas in number of workers who engaged in stoppages, with 544,000 and 773,700 workers, respectively (table 21). Most of these workers were in production and maintenance occupations and employed in the mining industry (tables 22 and 23).

One-third of total days idle in 1976 were due to stoppages in Region V (table 21). In two of the States in this region—Michigan and Ohio—days idle due to labor-management disputes exceeded 3 million. In Michigan, 35 percent of days idle were caused by strikes in transportation equipment manufacturing (table 23). Strike activity in the rubber industry accounted for 30 percent of all days idle in Ohio.

The idleness rates (days idle as a percent of working time) in Region X (0.30), Region V (0.29), and Region VII (0.28) were the highest in the Nation (table 21). Within Region X, the highest ranking region, the State of Washington recorded an idleness rate of 0.44 percent of working time. Ohio, in Region V, registered 0.47 percent. Iowa recorded the highest rate (0.43 percent) among the States in Region VII. Although Region IV as a whole averaged only 0.16 percent of worktime idle, Alabama and Kentucky reported rates of 0.43 and 0.48 percent, respectively.

Metropolitan area. Five metropolitan areas, one more than in 1975, each experienced more than 100 stoppages: Pittsburgh (164), Chicago (129), Los Angeles-Long Beach (126), Detroit (117), and New York City (115) (table 24).

Detroit was the metropolitan area with the most workers who engaged in labor disputes during 1976 (129,300). Ranking second, New York City had 99,700 workers who walked off their jobs. Three major walkouts accounted for three-fourths of these New York City workers (tables 5 and 24).

Whereas six metropolitan areas experienced more than 1 million days of idleness in 1975, only two were above this figure in 1976: Detroit (2.0 million) and Akron (1.1 million). Most of the idleness in Akron was due to disputes in the rubber industry (tables 23 and 24).

Type of settlement

More than 7 out of 10 stoppages were resolved by a formal settlement in which all disputed issues were cleared up or further dispute-handling procedures were specified (table 29). Formal settlements were not reached in one-fifth of all short protest or sympathy strikes. Only 4 percent of all strikes were broken and 3 percent were ended by a court injunction. In 0.7 percent of the labor management disputes the employer went out of business.

Almost all short protest or sympathy strikes took place in the nonmanufacturing sector (table 31). Ninety-five percent of these walkouts were in mining. Similarly, four-fifths of the strikes that ended because of a court injunction occurred in nonmanufacturing industries. Over half of these involved miners.

Chart 3. Idleness as a percent of estimated working time by sector, 1950-76

Seven out of 10 stoppages that ended in a formal settlement were over economic issues (table 30). On the other hand, more than 9 out of 10 of the short protest or sympathy strikes were caused by noneconomic disagreements, primarily over plant administration. Plant administration was the cause of 43 percent of the stoppages that were ended by court injunctions.

Nine-tenths of renegotiation disputes and three-fourths of stoppages during initial contract bargaining ended in formal settlements (table 29). Slightly more than half of the short protest or sympathy strikes conducted while a contract was in effect involved no formal settlement.

Impasse procedures

Dispute-handling procedures, in addition to head-to-head collective bargaining, may come into play either while negotiating an agreement or while tidying up unsettled issues after a formal agreement has been negotiated, or on both occasions.

Government mediation occurred in slightly less than half of the labor-management disputes in 1976 (table 28). In 8 out of 10 of these, the Federal Government was the mediator. Mediation by private sources occurred in only 2 percent of the stoppages.

Strikes that took place during contract renegotiations were more likely to involve mediators (73 percent) than those that occurred while an initial agreement was being bargained (54 percent) or during the term of contract (4 percent).

There were 516 stoppages that ended with a procedure for resolving still unsettled issues as a part of the formal settlement⁵ (table 32). Direct negotiation was the most frequently used impasse procedure (34 percent), followed closely by referral of unsettled matters to a government agency (27 percent).

When dispute-handling procedures were specified in settlements ending a stoppage occurring during contract renegotiations, more than half of the contracts called for continued direct negotiations. Almost as frequently, agreements consummated after the negotiation of an initial contract provided for referral of unsettled issues to a government agency. In their formal agreements, mid-contract stoppages most often (34 percent) requested intervention by a government agency to resolve still unsettled matters.

⁵For 25 strikes that involved 6,800 workers and 618,600 days idle, no information was available on the type of procedure included in the formal settlements.

¹ The number of stoppages and workers relate to those stoppages that began in the year, average duration, to those ending in the year. Days of idleness include all stoppages in effect. Workers are counted more than once if they were involved in more than 1 stoppage during the year.

Available information for earlier periods appears in *Handbook of Labor Statistics, 1975 Reference Edition*, BLS Bulletin 1865 (1975), tables 159-64. For a discussion of the procedures involved in the collection and compilation of work stoppage statistics, see *BLS Handbook of Methods*, BLS Bulletin 1910 (1976), ch. 27.

² Figures are simple averages; each stoppage is

given equal weight regardless of its size.

³ Agricultural and government employees are included in the total employed and total working time; private household, forestry, and fishery employees are excluded. An explanation of the measurement of idleness as a percentage of the total employed labor force and of the total time worked is found in "Total Economy Measure of Strike Idleness," *Monthly Labor Review*, Oct. 1968.

* Not available.

⁵ Does not include an undetermined number of jurisdictional disputes for which identifying information was not available.

¹ Totals in this table differ from those in tables 1 and 2 and 6-24 because these stoppages ended during the year, and thus include idleness occurring in prior years.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

Table 4. Work stoppages involving 10,000 workers or more, 1927-76

Table 5. Work stoppages involving 10,000 workers or more, beginning in 1976

Beginning date	Approximate duration (calendar days) ¹	Establishment(s) and location(s)	Union(s) involved ²	Approximate number of workers involved ³	Major terms of settlement ⁴
Mar. 1	7	Bituminous Coal Industry—Virginia, West Virginia	United Mine Workers of America (Ind.)	18,800	Protest over black lung legislation. Workers returned.
Mar. 11	15	Nevada Resort Association—Las Vegas	Hotel and Restaurant Employees and Bartenders International Union	20,000	4-year agreement provided annual wage increases averaging 30 cents the first 3 years and 35 cents the fourth year; employers' pension contributions to rise, in stages, to 40 cents an hour and health and welfare contributions to 37 cents an hour; "no strike, no-lockout" clause; subcontracting of work was limited.
Apr. 1	3	Trucking Industry—Nationwide	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.)	249,300	3-year agreement provided wage increase of \$1.65 an hour—65 cents on April 1, 1976, and 50 cents on April 1, 1977 and 1978—for local cartage drivers, and \$1, \$1.25, and \$1.25 per mile on the respective dates for over-the-road drivers; the cap was removed from the cost-of-living allowance; increased employer pension and health and welfare contributions; establishment of 3 days sick leave.
Apr. 5	3	Associated General Contractors of America, Inc.—Indiana	Laborers International Union of North America	14,500	3-year settlement provided 40-55 cents on April 1, 1976, 40-55 cents on April 1, 1977, and 40-45 cents on April 1, 1978; 45 cents an hour contribution to pension fund on April 1, 1976 (was 40 cents), increased to 50 cents on April 1, 1977, and 55 cents on April 1, 1978; 50 cents an hour contribution to health and welfare fund on April 1, 1976 (was 35 cents), increased to 60 cents on April 1, 1977 and 70 cents on April 1, 1978.
Apr. 21	141	Goodyear Tire and Rubber Co.; Firestone Tire and Rubber Co.; B. F. Goodrich Co.; Uniroyal, Inc.—Nationwide	United Rubber, Cork, Linoleum and Plastic Workers of America	56,200	3-year agreement first reached with Goodyear on August 24, with Firestone 2 days later, followed by Uniroyal on September 3, and finally Goodrich 3 days later; initial wage increase of 80 cents an hour with additional increases at the last 3 companies to eliminate pay level differences; 30 cent general wage increase on June 6, 1977, and 25 cents on May 1, 1978; cost-of-living clause established. (See <u>Current Wage Development</u> , September 1976, p. 1.)
May 1	16	United Parcel Service—11 Central and Midwestern States	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.)	12,200	3-year settlement provided 65 cents on May 1, 1976, 50 cents on May 1, 1977, and May 1, 1978; annual cost-of-living clause revised to permit unlimited adjustments; \$17 per week increase to pension and welfare funds (was \$44); provisions similar to trucking industry contract.
May 3	17	Apartment Buildings—New York City	Service Employees International Union	22,000	3-year agreement provided \$35 a week wage increases—\$13 immediately, \$6 in October 1977, and April 1978, and \$10 in October 1978; \$3 increase in employers' weekly contribution to the welfare fund and a \$1 increase in their pension contribution; cost-of-living clause continued.
May 28	17	Ohio Bell Telephone Company—Ohio	Communication Workers of America	12,000	CWA charged that the company violated the contract when it opened a retail store staffed by employees of a new job classification—phone center representative. The walkout was ended by a temporary restraining order that closed the store.
June 21	3	Commonwealth of Massachusetts—Statewide	American Federation of State, County, and Municipal Employees; Service Employees International Union	21,100	1-year contract ratified on November 1976 increased pay \$1,250; contract to expire June 30, 1977.
June 22	17	Associated General Contractors of America, Inc.—Arizona	Laborers International Union of North America; International Union of Operating Engineers; Bricklayers, Masons and Plasterers' International Union of America; International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.)	12,000	3-year agreement provided 15.6 percent increase in wages and fringe benefits over the contract's term; includes a 19-cent-an-hour pay increase in June 1976, a 26-cent-an-hour increase in January 1977, a 50-cent-an-hour increase on June 1, 1977, and on June 1, 1978.
June 28	7	General Electric Co.—Kentucky	International Association of Machinists and Aerospace Workers	13,900	3-year agreement provided general wage increases of \$24 a week on June 28, 1976, and \$10 a week or 4 percent (whichever is greater) on June 27, 1977 and June 26, 1978; skilled workers received an additional \$2-\$20 a week on June 28, 1976; an unlimited cost-of-living annual adjustment in November of 1 cent an hour for each 0.3 percent increase in the CPI up to 7 percent and above 9 percent with no credit toward the adjustment for that portion of the CPI rises between 7 and 9 percent. (See <u>Current Wage Development</u> , July 1976, p. 1.)
July 7	10	League of Voluntary Hospitals and Homes—New York City	Retail, Wholesale, and Department Store Union	37,700	Strike over the League's rejection of a Federal fact finding panel's recommendations of a cost-of-living wage increase based upon their contention that the new State limits on Medicaid and Blue Cross payments to the institutions precluded any pay raise; arbitration was agreed to after the State threatened to terminate all payments.
July 12	17	Westinghouse Electric Corp.—Nationwide	International Brotherhood of Electrical Workers; International Union of Electrical, Radio and Machine Workers; United Electrical, Radio and Machine Workers (Ind.)	30,200	3-year agreement similar to G.E. accord; wages increased 60 cents (including an 11-cent advance cost-of-living adjustment) on July 12, 1976, and 25 cents or 4 percent (whichever is greater) on July 11, 1977 and July 10, 1978; salaried employees received a 10 percent general increase (including a \$19-a-month advance cost-of-living adjustment); employer pension contribution raised to a range of \$7.50-\$11.00 (was \$6-\$9) a month for service prior to January 1, 1967, and \$7.50-\$12.00 (was \$7-\$10) for later service.

See footnotes at end of table.

Table 5. Work stoppages involving 10,000 workers or more, beginning in 1976—Continued

Beginning date	Approximate duration (calendar days) ¹	Establishment(s) and location(s)	Union(s) involved ²	Approximate number of workers involved ³	Major terms of settlement ⁴
July 16	43	Bituminous Coal Industry—Alabama, Colorado, Illinois, Indiana, Kentucky, Ohio, Pennsylvania, Virginia, West Virginia	United Mine Workers of America (Ind.)	110,100	Strike over a job posting dispute at the Cedar Coal Company; the strike spread after a Federal District Judge fined the local union on grounds of breach of contract a lump-sum amount plus an additional amount for every day the walkout continued; miners returned to work after the Judge said he would not impose the fines and jailterms and after 300 union officials endorsed a back-to-work order. No formal settlement.
July 20	12	California Processors Inc.—Nationwide	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.)	29,000	3-year settlement on July 31 provided an immediate increase of 30-52 cents an hour, a flat 53 cents an hour in the second year, and a flat 52 cents an hour in the third year; some skilled workers received an additional 50 cent an hour increase effective immediately; terminated the cost-of-living escalator clause; improved insurance benefits; an 11th paid holiday.
Aug. 4	4	New York City Health and Hospitals Corp.—New York	American Federation of State, County, and Municipal Employees	13,400	Strike over the layoff of 1,350 workers represented by AFSCME, the Teamsters, and the Practical Nurses Association; the 1,000 AFSCME members regained their jobs after union members agreed to forego their annual cost-of-living increase in 1976 and a possible adjustment in 1977.
Sept. 15	68	Ford Motor Company—Nationwide	United Automobile, Aerospace and Agricultural Implement Workers (Ind.)	166,300	3-year contract on October 5 provided all employees with a year of seniority, 5 additional days off in the second year, and 7 in the third year; general wage increases 3 percent of base rates, plus 20 cents an hour on October 18, 1976, and 3 percent base rates on September 19, 1977 and September 18, 1978; skilled workers received an additional 10 or 15 cents (depending upon their pay group) on October 18, 1976 and 10 cents on September 19, 1977; financing changes made to strengthen SUB Fund; one-time inflation bonus for retirees. (See <u>Current Wage Developments</u> , November 1976, pp. 1 and 15.)
Sept. 16	86	United Parcel Service—15 Eastern States	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.)	17,800	3-year contract on December 9 provided for maintenance of the number of full-time positions in each building as of September 15, 1976; immediate 65 cent hourly wage increase and 50 cents in the second and third years; unlimited annual cost-of-living adjustments in the second and third years; additional health and welfare and pension contributions; up to \$50 reimbursement for personal losses from holdups.
Sept. 18	1	Trans World Airlines—Nationwide	International Association of Machinists and Aerospace Workers	22,800	3-year settlement provided 5 percent increase retroactive to November 1, 1975, 4.7 percent retroactive to July 1, 1976, 2.8 percent on January 1, 1977, 4.3 percent on July 1, 1977, 3.4 percent on January 1, 1978, and 2.2 percent on July 1, 1978; 13 cents an hour longevity pay after 16 years service (was 10 cents, maximum after 13 years); improved hospitalization, dental, and major medical benefits; \$2,000 increase in life insurance; \$2 monthly benefits increase in pension service benefits; 12 cents automatic cost-of-living adjustment retroactive to September 1, 1976.
Oct. 1	39	John Deere and Company—Nationwide	United Automobile, Aerospace, and Agricultural Implement Workers (Ind.)	27,000	3-year contract provided a 33-43 cent increase for hourly paid employees and a 27-36 cent increase for incentive workers; 3 percent increases in the second and third years; incorporated most of current cost-of-living adjustments into base rates; unlimited quarterly cost-of-living adjustments. (See <u>Current Wage Developments</u> , December 1976, pp. 1 and 9.)
Nov. 18	4	International Harvester—Nationwide	United Automobile, Aerospace and Agricultural Implement Workers (Ind.)	32,600	3-year contract provided a 3 percent annual improvement factor in 1977 and 1978; \$1.16 of current \$1.21 cost-of-living allowance incorporated into base rates; terminated the "bonus hours" program (improved at Deere) in favor of increased time off under the vacation plan. (See <u>Current Wage Developments</u> , December 1976, pp. 1 and 8.)
Nov. 19	1	General Motors Corp.—Nationwide	United Automobile, Aerospace and Agricultural Implement Workers (Ind.)	66,700	A 12-hour "mini-strike" was held; 3-year contract provided that the company would "neither discourage nor encourage" union organizing efforts; 3 percent increase of base rates in 1977 and 1978; similar to Ford agreement with incorporation of \$1.09 of current \$1.44 cost-of-living allowance into base rates.
Dec. 10	1	General Motors Corp.—Nationwide	International Union of Electrical, Radio and Machine Workers	25,500	3-year settlement provided a 3 percent hourly wage increase plus 20 cents per hour in the first year retroactive to September 20, 1976 when the old contract expired; paid absence allowance; retirees received \$20 per year of service allowance (maximum of \$300) to be paid prior to December 1977; GM included a letter promising a neutral attitude in the selection of bargaining units in its southern plants.

¹ Includes nonworkdays, such as Saturdays, Sundays, and established holidays.

² The unions listed are those directly involved in the dispute but the number of workers involved may include members of other unions or nonunion workers idle by disputes in the same establishments. The unions are affiliated with the AFL-CIO, except where they are noted as independent (Ind.).

³ The number of workers involved is the maximum made idle for 1 shift or longer in establishments directly involved in a stoppage. This does not measure the indirect or secondary effect on other establish-

ments or industries whose employees are made idle as a result of material or service shortages.

⁴ Adapted largely from Current Wage Developments, published monthly by the Bureau of Labor Statistics.

⁵ The nationwide strike began on September 15 and ended on December 10. However, many sites continued to be struck over local issues. While the duration of the national contract strike was approximately 28 calendar days, the duration of strikes over local issues ranged from 29 to 68 calendar days including the 28 days.

¹ The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in 2 or more groups are counted in each. Workers involved and days idle are allocated among the respective groups.

² Includes other finished products made from fabrics and similar materials.

³ Excludes ordnance, machinery, and transportation equipment.

⁴ Includes professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks.

⁵ The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

⁶ Fewer than 50.

⁷ Ineffectiveness resulting from stoppage(s) beginning in prior year(s).

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ Less than 0.05 percent.

² Includes disputes between unions of different affiliation, such as those between AFL-CIO affiliates and independent organizations.

³ Fewer than 50.

⁴ Includes disputes between unions, usually of the same affiliation or between two locals of the same union,

over representation of workers.

⁵ Includes disputes within a union over the administration of union affairs or regulations.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in 2 or more groups are counted in each. Workers involved and days idle are allocated among the respective groups.

² Includes other finished products made from fabrics and similar materials.

³ Excludes ordnance, machinery, and transportation equipment.

⁴ Includes professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks.

⁵ Fewer than 50.

⁶ The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

⁷ Idleness resulting from stoppage(s) beginning in prior year(s).

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ See footnote 1, table 1.

² Mean duration is calculated only for stoppages ending in the year, and is weighted by multiplying the duration of each stoppage by the workers involved.

³The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in two or more groups have been counted in each. Workers involved and days idle have been allocated among the respective groups.

⁴ Fewer than 50.

⁵ Less than 0.005 percent.

⁶ The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in 2 or more groups are counted in each. Workers involved and days idle are allocated among the respective groups.

² Includes other finished products made from fabrics and similar materials.

³ Fewer than 50.

⁴ Excludes ordnance, machinery, and transportation equipment.

⁵ Includes professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks.

⁶ The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

⁷ Idleness resulting from stoppage(s) beginning in prior year(s).

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

Table 16. Work stoppages by major issue and level of government, 1976¹

¹ The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

² The total number of stoppages reported for all functions or an individual level may not equal the sums of its components because individual

stoppages occurring in 2 or more groups are counted in each. Workers and days idle are allocated among the respective groups.

Fewer than 50.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ Stoppages extending across State lines were counted separately in each State affected; workers involved and days idle were allocated among the States.

² Excludes strike(s) where there is no union.

³ Fewer than 50.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ Stoppages extended across State lines are counted separately in each State affected; workers involved and days idle were allocated among the States.

² Mean duration is calculated only for stoppages ending in the year, and is weighted by multiplying the duration of

each stoppage by the workers involved.

³ Excludes private household workers.

NOTE: Because of rounding, sums of individual items may not equal totals.

¹ Stoppages extending across State lines have been counted separately in each State affected; workers involved and days idle were allocated among the States.

² Fewer than 50.

³ Idleness resulting from stoppage(s) in prior year(s).

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in two or more groups have been counted in each. Workers involved and days idle have been allocated among the respective groups.

²Fewer than 50.

³Includes other finished products made from fabrics and similar materials.

⁴Excludes ordnance, machinery, and transportation equipment.

⁵Includes professional, scientific, and controlling instruments; photo-

graphic and optical goods; watches and clocks.

⁶The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ Includes data for each metropolitan area in which five stoppages or more began in 1976. Some metropolitan areas include the counties in more than one State, and hence, an area may equal or exceed the total for the State in which the major city is located. Stoppages in the logging and mining industries are excluded. Stoppages occurring in more than one metropolitan area are counted separately in each area affected; the workers involved and days idle are allocated to the respective areas.

² Included in the Chicago, Ill.-Northwestern Indiana Standard Consolidated Area.

³ Included in the New York-Northeastern New Jersey Standard Consolidated Area.

⁴ Included in the New York City SMSA and New York-Northeastern New Jersey Standard Consolidated Area.

NOTE: Because of rounding, sums of individual items may not equal totals.

¹ Totals in this table differ from those in tables 1 and 2 and 6-24 because these stoppages ended during the year, and thus include idleness occurring in prior years.

² The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in 2 or more groups are counted in each. Workers involved and days idle are allocated among the respective groups.

³ Includes other finished products made from fabrics and similar materials.

⁴ Excludes ordnance, machinery, and transportation equipment.

⁵ Includes professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks.

⁶ The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage has taken place in violation of any law or public policy.

Fewer than 50.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (—) denote zeros.

¹ Totals in this table differ from those in tables 1 and 2 and 6-24 because these stoppages ended during the year, and thus include idleness occurring in prior years.

* Fewer than 50.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ Totals in this table differ from those in tables 1 and 2 and 6-24 because these stoppages ended during the year, and thus include idleness occurring in prior years.

² The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in two or more groups are counted in each. Workers involved and days idle are allocated among the respective groups.

³ Includes other finished products made from fabrics and similar materials.

⁴ Excludes ordnance, machinery, and transportation equipment.

⁵ Includes professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks.

⁶ The situations reported here have, for statistical purposes, been deemed to fall within the Bureau's definition of a work stoppage. This decision does not constitute a legal determination that a work stoppage had taken place in violation of any law or public policy.

⁷ Fewer than 50.

NOTE: Because of rounding, sums of individual items may not equal totals. Dashes (-) denote zeros.

¹ Data for 1942-46 were originally published as part of the industry group "Iron and steel and their products."

² Not available.

³ Data for 1937-41 were originally published under "Textiles and their products; Fabrics."

⁴ Data for 1937-41 were originally published under "Textiles and their products; Wearing apparel."

⁵ Less than 0.005 percent.

⁶ Data for 1937-41 exclude furniture which had been included in this group when published in annual reports for those years.

⁷ Data for 1937-41 were originally published as part of the lumber and allied products industry.

⁸ Data for 1937-41 appeared in earlier publications under "Paper and printing." These figures are for boxes, paper; paper and pulp.

⁹ Data for 1937-41 were originally published under "Paper and printing." These figures are for printing and publishing; book and job, and newspapers and periodicals.

¹⁰ Data for 1937-41 exclude petroleum refining which had been included in this group when published in annual reports for those years.¹¹ Prior to 1942, petroleum refining was included under "Chemicals and allied products." Beginning with 1958, establishments primarily engaged in producing coke and by products were included under "Primary metal industries."

¹² Prior to 1958, miscellaneous plastics products were included under "Miscellaneous manufacturing industries."

¹³ Industry groups which include some of the components of the fabricated metal products group are not entirely comparable in years prior to 1947. See "Iron and steel and their products" and "Nonferrous metals and their products" in annual bulletins for the earlier years.

¹⁴ For the period 1937-41, electrical machinery, apparatus, and supplies; radios, and phonographs were included in the published figures for the machinery group. In this table these 2 industries have been excluded from 1937-41 to make the figures comparable with subsequent years.

¹⁵ For the period 1937-41, electrical machinery, apparatus, and supplies; radios, and phonographs were included in the published figures for the machinery group. In this table these 2 industries have been excluded from 1937-41 to make the figures comparable with subsequent years.

¹⁶ Days idle in the primary metals industry group during the steel strike have been computed on the basis of average employment throughout the affected months, rather than on the usual basis of employment in the pay period ending nearest to the 15th of each month. If the percentage of time lost was calculated on the basis of ratio of time lost to time worked plus time lost, it would have been 12.12 for the primary metal industry group.

¹⁷ For the period 1937-41, radios and phonographs were added to the published figures for electrical machinery, equipment, and supplies, to make those years comparable with subsequent years.

¹⁸ For the period 1942-46, transportation equipment (except automobiles) and automobiles and automobile equipment have been combined.

¹⁹ Information for years prior to 1947 is not comparable with later years. Some of the components of this group were included in "Nonferrous metals and their products," "Machinery, except electrical," and "Miscellaneous manufacturing industries." "Instruments, etc." includes professional, scientific, and controlling instruments; photographic and optical goods; watches and clocks.

²⁰ For the period 1942-46, professional instruments, etc., was omitted to make the data comparable with subsequent years.

²¹ Idleness as a percent of estimated working time does not include government workers.

²² Less than 0.005 percent.

²³ For 1937-41 the title was "Extraction of minerals."

²⁴ Data for 1937-41 include electric light, power, and manufactured gas which was published in those years under "Miscellaneous manufacturing industries." For the 1937-58 period, the group includes municipally operated utilities.

²⁵ Data for 1937-41 are not entirely comparable with subsequent years and have been omitted for this reason.

²⁶ During the period 1937-41, government strikes were included in "Other nonmanufacturing industries."

NOTE: The number of stoppages reported for a major industry group or division may not equal the sum of its components because individual stoppages occurring in 2 or more industry groups have been counted in each. The major industry group and division totals have been adjusted to eliminate duplication. Workers involved and days idle have been allocated among the respective industry groups.

Because of rounding, sums of individual items may not equal totals. Dashes denote zeros.

Appendix B. Scope, Definitions, and Methods

Scope

It is the purpose of this statistical series to report all work stoppages in the United States that involve six workers or more and continue for the equivalent of a full day or shift or longer.

Definitions

Strike or lockout. A strike is defined as a temporary stoppage of work by a group of employees (not necessarily members of a union) to express a grievance or enforce a demand. A lockout is a temporary withholding or denial of employment during a labor dispute to enforce terms of employment upon a group of employees. Because of the complexity of most labor-management disputes, the Bureau makes no attempt to distinguish between strikes and lockouts in its statistics; both types are included in the term "work stoppage" and are used interchangeably. The terms "dispute," "labor-management dispute," and "walkout" are also used interchangeably.

Workers and idleness. The figures on the number of "workers involved" and "days idle" include all workers made idle for one shift or longer in establishments directly involved in a stoppage. They do not account for secondary idleness—that is, the effects of a stoppage on other establishments or industries whose employees may be made idle as a result of material or service shortages.

The total number of workers involved in strikes in a given year may include double counting of individual workers if they were involved in more than one stoppage during that year. (Thus, in 1974, the Bureau recorded some 460,000 bituminous coal and lignite mining workers as participating in strikes, while 165,000 workers were employed in the industry.)

In some prolonged stoppages, the total days of idleness are estimated if the number of workers idle each day is not known. Significant changes in the number of workers idle are secured from the parties for use in computing days of idleness.

Methods

The relative measures. In computing the number of workers involved in strikes as a percent of total employment and idleness as a percent of total working time, the following employment figures have been used:

From 1927 to 1950, all employed workers were included in the base, except those in occupations and professions in which little, if any, union organization existed or in which stoppages rarely, if ever, occurred. In most industries, all wage and salary workers were included in total employment except those in executive, managerial, or high supervisory positions, or those performing professional work the nature of which made union organization or group action unlikely. This measure of employment also excluded all self-employed persons; domestic workers; workers on farms employing fewer than six persons; all Federal and State government employees; and officials, both elected and appointed, in local government.

From 1951 to 1966, the Bureau's estimates of total employment in nonagricultural establishments, exclusive of government, were used as a base. Days of idleness computed on the basis of nonagricultural employment (exclusive of government) usually differed by less than one-tenth of a percentage point from that obtained by the former method, while the percentage of workers idle (compared with total employment) differed by about 0.5 of a point. For example, the percentage of workers idle during 1950 computed on the base used for the earlier years was 6.9, and the percentage for days of idleness was 0.44, compared with 6.3 and 0.40, respectively, computed on the new base.

From 1967 to 1973, two estimates of employment were used, one based on the wage and salary workers in the civilian work force, and the other on those in the private nonfarm sector.¹ The new private nonfarm series closely approximated the former BLS series which, as noted, excluded government and agricultural workers from employment totals, but accounted for idleness by such workers while on strike. The old method had resulted in an increasingly distorted measure of the severity of strikes; the likely growth of strike activity among government and farmworkers would have distorted the measure even more in the future. The "total economy" measure of strike idleness now included government and agricultural workers in its employment count as well as in the computation of idleness ratios, but excluded forestry, fishery, and private household workers from the base. To facilitate comparisons over time, the figure for the total economy had been carried back to 1939 (see table 1). The "private nonagricultural"

¹ For further information, see "Total Economy" Measure of Strike Idleness," *Monthly Labor Review*, October 1968, pp. 54-56.

Table B-1. Methods of computing relative measures of idleness

Component	Total economy measure	Nonagricultural sector measure	Private nonagricultural sector measure
Employment	Establishment series plus wage and salaried farm workers.	Establishment series.	Establishment series less government.
Estimated working time	Above employment times working days.	Above employment times working days.	Above employment times working days.
Days of idleness as a percent of estimated total working time	$\frac{\text{Total idleness}}{\text{Above working time}} \times 100$	$\frac{\text{Total idleness less farm}}{\text{Above working time}} \times 100$	$\frac{\text{Total idleness less farm and government}}{\text{Above working time}} \times 100$

measure excluded agricultural and government workers from employment totals and these groups were also removed from strike figures in arriving at a percentage of nonagricultural working time idle.

Beginning in 1974, government workers have been added to employment and idleness ratios. (See table 21.)

The differences in the various measures are illustrated in table B-1 in which the components of each measure and the methods of computation are set forth.

"Estimated working time" is computed by multiplying the average employment for the year by the number of days typically worked by most employed workers during that year. In these computations, Saturdays (when customarily not worked), Sundays, and established Federal holidays are excluded.²

Duration. Although only workdays are used in computing total days of idleness, duration is expressed in calendar days, including nonworkdays.

State data. Stoppages occurring in more than one State are listed separately in each State affected. The workers and days of idleness are allocated among each of the affected States.³ The procedures outlined in the section on relative measures also have been used in preparing estimates of idleness by State.

Metropolitan area data. Information is tabulated separately for the areas that currently comprise the list of Standard Metropolitan Statistical Areas (SMSA's) as defined by the Office of Management and Budget and, in addition, for a few communities historically included in the strike series before the current list of areas was compiled. Information is published only for those areas in which at least five stoppages were recorded during the year.

Some metropolitan areas include counties in more than one State, and hence, statistics for an area may occasionally equal or exceed totals for the State in which the major city is located. Stoppages in the mining and logging

industries are excluded from metropolitan area data but are reported by industry and State.

Unions involved. For this purpose, the union is the organization whose contract was involved or which has taken active leadership in the stoppage. Disputes involving more than one union are classified as jurisdictional or rival union disputes or as involving cooperating unions. If unorganized workers strike, a separate classification is used. However, the tabulations of "workers involved" include all who are made idle for one shift or longer in establishments directly involved in the dispute, including members of other unions and nonunion workers. Information is presented by major affiliation of the union, i.e., AFL-CIO, or, if there is no affiliation, by the designations "independent," "single firm," or "no union."

Sources of information

Occurrence of strikes. Information on the actual or probable existence of work stoppages is collected from a number of sources. Clippings on labor disputes are obtained from a comprehensive coverage of daily and weekly newspapers throughout the country. Information also is received regularly from the Federal Mediation and Conciliation Service. Other sources of information include State boards of mediation and arbitration; research divisions of State labor departments; local offices of State employment security agencies; and trade and union journals. Some employer associations, companies, and unions also furnish the Bureau with work stoppage information on a voluntary cooperative basis, either as stoppages occur or periodically.

² For example, the total economy figure for 1974 was computed by multiplying the average employment for the year by the number of working days ($79,683,000 \times 252 = 20,080,116,000$) and dividing this figure into the total number of days of idleness.

³ The same procedure is followed in allocating data on stoppages occurring in more than one industry, industry group, or metropolitan area.

Respondents to questionnaire. A questionnaire is mailed to each of the parties reported as involved in work stoppages to obtain information on the number of workers involved, duration, major issues, location, method of settlement, and other pertinent information.

Limitations of data. Although the Bureau seeks to obtain complete coverage, i.e., a "census" of all strikes involving six workers or more and lasting a full shift or more, information is undoubtedly missing on some strikes involv-

ing small numbers of workers. Presumably, these missing strikes do not substantially affect the number of workers and days of idleness reported.

To improve the completeness of the count of stoppages, the Bureau has constantly sought to develop new sources of information on the probable existence of stoppages. Over the years, these sources have probably increased the number of strikes recorded, but have had little effect on the number of workers or total idleness. As new agencies or organizations having knowledge of the existence of work stoppages are established or identified, every effort is made by the Bureau to establish cooperative arrangements.
